ANDHRA UNIVERSITY

Established in 1926, it is a non-profit public higher education institution located in the city of Visakhapatnam, Andhra Pradesh. It is one of the oldest and prestigious educational institutes in the country. It was ranked 29 in India overall by the National Institutional Ranking Framework in 2019 and 16 among Universities. The institution has Sir C.R. Reddy as its founder Vice-Chancellor and Sarvepalli Radhakrishnan as the second Vice-Chancellor. There are 363 affiliated colleges spread across two districts. The University has well experienced faculty known worldwide for their research contributions.

DEPARTMENT OF HUMAN GENETICS

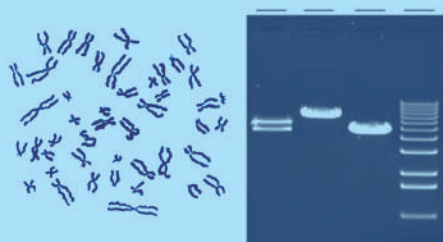

The Department of Human Genetics in Andhra University was established in the year 1972 for the first time in India. This department offers a two year M.Sc. course, M.Phil. and Ph.D. programs. This is a small department with huge potential. Majority of the studies are concerned with the study of human variation in health and disease. Currently there are two ongoing ICMR funded projects focusing on chronic kidney disease and sickle cell anemia. The department is catering to the genetic counseling needs of the people in and around Visakhapatnam and is also of immense help in diagnosing sickle cell disease which is more common in the nearby agency area.

KAMINENI HOSPITALS

Kamineni is the first corporate hospital in the two telugu states to have a Genetics unit staffed with experts in the field of Genetic and Molecular Medicine. The department carries out Genetic tests, with pre-test and post-test counseling. They specialize in premarital, prenatal, infertility; oncology based Genetic testing and counseling.

ABOUT THE WORKSHOP

With a view to impart the knowledge of Cyto and Molecular Genetic techniques, the Human Genetics Department in collaboration with Kamineni Hospitals, is conducting a two day National workshop. The workshop aims to give hands-on training to the participants in the field of Cytogenetics and Molecular Genetics. They will be introduced to the concept of cell culture, karyotyping, PCR amplification of DNA and mutation analysis. Participation in this workshop would give an insight into the techniques that are routinely used in diagnosis of genetic disorders
