

CENTRE FOR NANOTECHNOLOGY
M TECH. (NT): SCHEME OF INSTRUCTION AND EXAMINATION
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

I – SEMESTER

Code No.	Course title	Scheme of Instruction			Scheme of Examination			Total	Credits
		Lec.	Tut.	Total	Exam. Duration	Theory /Lab./Viva	Sess.		
NT 101	Core subject 1: Quantum Physics & Quantum Chemistry	4	--	4	3	70	30	100	4
NT 102	Core subject 2: Introduction to Nanotechnology	4	--	4	3	70	30	100	4
NT 103	Core subject 3: Electronic Devices and Circuits	4	--	4	3	70	30	100	4
NT 104	Core subject 4: Carbon Nanotube Science and Technology	4	--	4	3	70	30	100	4
NT 105	Elective Subject - 1 1. Chemistry of Nanomaterials 2. Green Manufacturing Technology 3. Nanoscale Magnetic Materials and Devices 4. Micro Nano Mechanics 5. Nanoionics: Concepts and Technological Applications 6. Nano CMOS Circuit and Physical Design 7. Quantum Mechanics for Nanotechnology 8. Advanced Finite Element Analysis	4	--	4	3	70	30	100	4
NT 106	Elective Subject - 2 1. Thin Film Science and Technology 2. Statistical Thermodynamics for Nanosystems 3. Spectroscopic Techniques for Nanomaterials 4. Bionanotechnology 5. Nano Materials For Energy and Environment 6. Micro/ Nano Colloids and Emulsions 7. Nanoscale Integrated Computing	4	--	4	3	70	30	100	4

	8. Computational Fluid Dynamics								
NT 107	Lab 1: Synthesis of Nanomaterials	--	3	3	Viva-Voce	50	50	100	2
NT 108	Lab 2: Computer Aided modeling and Simulation		3	3	Viva-Voce	50	50	100	2
Total		24	6	30		520	280	800	28

II – SEMESTER

Code No.	Course title	Scheme of Instruction			Scheme of Examination			Total	Credits
		Lec.	Tut.	Total	Duration of Exam. (hrs)	Theory Lab./ Viva	Sess.		
NT 201	Core subject 1: Characterization of Materials	4	--	4	3	70	30	100	4
NT 202	Core subject 2: Micro and Nano Fabrication	4	--	4	3	70	30	100	4
NT 203	Core subject 3: Polymer Nanocomposites	4	--	4	3	70	30	100	4
NT 204	Core subject 4: Nanofluids Science and Technology	4	--	4	3	70	30	100	4
NT 205	Elective Subject - 3 1. Nanolithography and Devise Fabrication 2. Nanotoxicology 3. Nanotechnology Business Applications and Commercialization 4. Social Impacts of Nanotechnology 5. Fuel Cell Technology 6. Computational Nanotechnology 7. Nanomaterials for Solar Energy and Photovoltaics 8. Advanced Mechanics of Composite Materials	4	--	4	3	70	30	100	4
NT 206	Elective Subject - 4 1. Research Methodology – Engineering and Management Studies 2. Advanced Optimization Techniques 3. Computational Methods in Fluid Flow and Heat Transfer 4. Nanotechnology in	4	--	4	3	70	30	100	4

	Health Care 5. Nanotechnology Intellectual Property Rights 6. Nanopollution and e- Waste Management 7. Industrial Nanotechnology 8. Nanotechnology in Polymers								
NT 207	Lab 1: Characterization of Nanomaterials and Nano Structures	--	3	3	Viva-Voce	50	50	100	2
NT 208	Seminar		3	3	Viva-Voce	50	50	100	2
Total		24	6	30		520	280	800	28

III – SEMESTER

Code No	Course title	Scheme of Examination	Total Marks	Credits
NT 301	Dissertation (Preliminary)	Viva-voce	100	10

IV – SEMESTER

Code No	Course title	Scheme of Examination	Total Marks	Credits
NT 401	Dissertation (Final)	Viva-voce	100	14

oo0oo

**CORE SYLLABUS
FIRST SEMESTER
NT 101 QUANTUM PHYSICS & QUANTUM CHEMISTRY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

BASIC PHYSICAL AND QUANTUM ASPECTS OF CHEMISTRY

Periodic table, surface energy of nanostructure materials, thermodynamic laws. Helmholtz equation, Gibbs free energy. Basic postulates and Theorem of quantum mechanics. Quantum mechanics of particle in box, one dimensional harmonic oscillator, Rigid Rotator and Hydrogen-like atoms. Orbitals and shapes of orbital. Theories of chemical bonding. Valence bond theory. Molecular orbital theory and LCAO approximation. MO theory of H_2 and H^{2+} ion. Electronic structure. Linear combination of atomic structure.

CRYSTAL STRUCTURE AND SIZE EFFECTS ON STRUCTURE AND MORPHOLOGY OF NANOPARTICLES

Simple crystal structures- Sodium chloride structure. Cesium Chloride structure. Hexagonal close-packed structure. Hexagonal zinc sulfide (Wurtzite) structure. Diffraction of waves by crystals-Bragg law, Scattered wave amplitude-Fourier analysis, Reciprocal lattice vectors; Brillouin zone-reciprocal lattice to sc lattice, reciprocal lattice to BCC lattice, Reciprocal lattice to FCC lattice point defects-lattice vacancies; diffusion metals; color centers-f centers, other centers in alkali halides. Fundamental Properties - Size Effects on Structure and Morphology of Free or Supported Nanoparticles - Size and Confinement Effects - Fraction of Surface Atoms - Specific Surface Energy and Surface Stress - Effect on the Lattice Parameter - Effect on the Phonon Density of States - Nanoparticle Morphology - Equilibrium Shape of a Macroscopic Crystal - Equilibrium Shape of Nanometric Crystals - Morphology of Supported Particles.

PHONON DYNAMICS AND THERMAL PROPERTIES

Overview of Reciprocal lattice, Brillouin zone – Crystals with monoatomic basis – Two atoms per primitive basis – Quantization of Elastic waves – Phonon momentum – Elastic properties – Phonon Heat Capacity – Planck distribution – Density of states – Einstein's model of Density of states - Thermal expansion – Heat conduction by Phonons – Vibrational and Thermal properties of Nanostructures .Vibration of Monoatomic lattices- First Brillouin zone, group velocity. Long wave length or continuum limit, derivation of force constants from experiment. Lattice with two atoms per primitive cell. Quantization of lattice vibrations. Phonon momentum. Inelastic scattering of neutrons by phonons.

ELECTRONIC, OPTICAL AND MAGNETIC PROPERTIES OF MATERIALS:

Free electron theory of metals, Band theory of solids, Bloch theorem, Kronig-Penney model, Metals and Insulators, Semiconductors: Classification, Transport properties, Size and Dimensionality effects, Band structures, Brillouin zones, Mobility, Resistivity, Relaxation time, Recombination centers, Hall effects. Optical Properties, Photoconductivity, Optical absorption & transmission, Photoluminescence, Fluorescence, Phosphorescence, Electroluminescence. Magnetic Materials: Basic Magnetic Phenomena; Diamagnetism, Paramagnetism, Ferromagnetism, Ferrimagnetism, Anti-ferromagnetism, Some examples of these materials and their applications, RKKY Interactions, Ferrofluids, Introduction to superconductivity; London Equation and Josephson effect.

NT 102 INTRODUCTION TO NANOTECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

INTRODUCTION

Importance of Nano-technology, Emergence of Nano-Technology, Bottom-up and Top-down approaches, challenges in Nano Technology.

PROPERTIES OF LOW DIMENSIONAL SYSTEM

Transport properties: quantization of conductance, density of states, Coulomb blockade, Kondo effect. Hall, quantum Hall, fractional quantum hall effects Vibrational and thermal properties: phonons, quantization of phonon modes, heat capacity and thermal transport, Optical properties: Collective oscillation (Gustav-Mie explanation), surface plasmon resonance, interactions between Nanoparticles, coupled-dipole approximation, Linear and Nonlinear optical properties.

ZERO DIMENSIONAL NANO-STRUCTURES

Nano particles through homogenous nucleation; Growth of nuclei, synthesis of metallic nano particles, Nano particles through heterogeneous nucleation; Fundamentals of heterogeneous nucleation and synthesis of nano particles using micro emulsions and Aerosol.

ONE DIMENSIONAL NANO-STRUCTURE, NANO WIRES AND NANO RODS

Spontaneous growth: Evaporation and condensation growth, vapor-liquid-solid growth, stress induced recrystallization. Template based synthesis: Electrochemical deposition, Electrophoretic deposition. Electro spinning and Lithography.

TWO DIMENSIONAL NANO-STRUCTURES:

Fundamentals of film growth. Physical vapour Deposition (PVD): Evaporation molecular beam epitaxy (MBE), Sputtering, Comparison of Evaporation and sputtering. Chemical Vapour Deposition (CVD) : Typical chemical reactions, Reaction kinetics, transport phenomena, CVD methods, diamond films by CVD.

THIN FILMS

Atomic layer deposition (ALD), Electrochemical deposition (ECD), Sol-Gel films, Advantages, Disadvantages and Applications of Thin Films

TRANSPORT PHENOMENA

Confinement and Transport in nanostructure, Current, Reservoirs and Electron channels, Conductance formula for nanostructures, Quantized conductance. Local density of states. Ballistic transport, Coulomb blockade, Diffusive transport, Fock space.

**CORE SYLLABUS
FIRST SEMESTER
NT 103 ELECTRONIC DEVICES AND CIRCUITS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

DIODE CHARACTERISTICS AND APPLICATIONS

Diode working, Basic applications of PN diode, Diode specifications, Diode equivalent circuits, Characteristics of a PN diode, Volt-ampere characteristics of PN diode, Diode resistances, Diode testing, Varactor diode, Zener diode, Tunnel diode Light Emitting Diode, Photo diode, Solar cells. Rectifier Circuits: Half-wave rectifier, Full-wave rectifier, Bridge rectifier, Comparative characteristics of rectifier circuits, Filter circuits

TRANSISTOR CHARACTERISTICS AND APPLICATIONS

Operation of the transistor, Transistor configurations, Current amplification factor, β , Differences among the parameters of CE, CB and CC transistor configurations, The transistor equivalent circuits, The specification parameters correspondent to maximum ratings of BJT, Applications of transistors, Testing of transistors.

BIASING AND STABILITY OF TRANSISTORS

Biasing of amplifiers, Definition of operating point, Stability factors, Self-bias or emitter bias, Diode compensation, Thermistor compensation, Sensistor compensation, Thermal runaway, Thermal resistance, Thermal stability.

FIELD EFFECT TRANSISTORS

Classification of field effect transistors, Junction field effect transistors (JFET), The salient features of JFET, Comparative characteristics of JFET and BJT, Merits of JFET. Demerits of JFET, Construction of JFET, JFET characteristics, JFET parameters, Transfer characteristics, Drain characteristics, Applications of JFETs, Metal oxide semiconductor field effect transistor (MOSFET), Enhancement type MOSFET, Depletion type MOSFET, Salient features of enhancement and depletion type of MOSFET

FEEDBACK AMPLIFIERS

Expression gain with feedback, First classification of feedback amplifiers, Negative feedback amplifier, Positive feedback, Second classification of feedback amplifiers, Characteristics of negative feedback amplifier, Characteristics of positive feedback, Effect of negative feedback on gain stability, Effect of negative feedback on bandwidth, Effect of negative feedback on distortion, Effect of negative feedback on non-linear distortion, Effect of negative feedback on noise, Voltage-series feedback, Voltage-shunt feedback, Current-series feedback, Current-shunt feedback amplifier, The net effects of feedback circuits, Applications of negative feedback.

OSCILLATORS

Definition of oscillator, Definition of generator, Conditions for oscillators, Barkhausen criteria, The characteristics of oscillators, Classification of oscillators, Sinusoidal oscillators, Relaxation oscillators, RC phase shift oscillator, Salient features of RC phase oscillator, Wein bridge oscillator, Colpitts oscillator, Hartley oscillator, The crystal oscillator

OPERATIONAL AMPLIFIERS AND APPLICATIONS

Introduction to integrated circuits, Salient features of op-amps, Symbol of op-amp, Classification of integrated circuits, Differences between linear and digital ICs, Characteristics of an ideal op-amp, Applications of operational amplifiers, The equivalent circuit of op-amp, The circuits inside an op-amp, Definitions of op-amp parameters, Frequency sensitive parameters of op-amp, Temperature sensitive parameters, Applications of linear ICs, Typical op-amps, Salient features of op-amp 741 series, Specifications of μA 741, Virtual ground concept, Applications of op-amp, Typical pin designations of op-amp

ELECTRICAL & ELECTRONIC PROPERTIES OF MATERIALS

Dielectric Materials: Polarization, Dielectric constant, refractive index, Polar and Non polar materials, Debye equation, Dielectric break down, Piezoelectricity, Pyroelectricity, Ferroelectricity; Magnetic Materials: Hysteresis curve, Soft and Hard magnetic materials,

Spintronics; Optoelectronics: LEDs, Integrated Optics, Nonlinear Fabry – Perot cavities; Superconductivity: Thermodynamical treatment, Surface Energy, The Landau – Ginzburg theory, energy gap, High T_c Superconductors, New superconductors; Artificial materials or metamaterials.

**CORE SYLLABUS
FIRST SEMESTER
NT 104 CARBON NANOTUBE SCIENCE AND TECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

INTRODUCTION TO CARBON MATERIALS

Relationship of Carbon Nanotubes with other Carbon Materials, Structure of Bucky Balls Fullerenes and Carbon Nanotubes

SYNTHESIS OF CARBON NANOTUBES

Various Techniques of Synthesis, Growth Mechanism of Bucky Balls, Fullerenes, SWCNT & MWCNT, Purification and Separation of carbon Nanotubes

CHARACTERIZATION OF CARBON NANOTUBES

Physical, Mechanical & Thermal Properties of CNT, Electronic & Optical Properties, Raman & Other Spectroscopic Techniques

CHEMICALLY MODIFIED NANOTUBES

Doping of CNT, Intercalation of CNT, Reactivity and Functionalisation, Opening and Filling CNT

INTRODUCTION TO CARBON NANOTUBE COMPOSITES

Polymer & Metal Matrix Nanotubes Composites, Potential Application of Carbon Nanotubes, Electronics and Field Emission Applications, Supercapacitors and Actuators, Sensors and Probes, Batteries and Fuel Cell Applications, Gas Adsorption and Storage Applications, Nanotubes from Inorganic Materials, Properties of Inorganic nanotubes, Applications of Inorganic Nanotubes, Modelling of Carbon nanotubes,

MEMS AND NEMS DEVICES AND APPLICATIONS

Carbon Nanotube sensor concepts-design considerations, fabrication of the CNT sensors and state of art applications. Biosensors: Clinical Diagnostics, Classification of biosensors, immobilization characteristics applications, conducting Polymer based sensor, DNA Biosensors, optical sensors, Biochips.

ELECTIVE - I
NT 105: 1 CHEMISTRY OF NANOMATERIALS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

SIZE EFFECTS ON STRUCTURE AND MORPHOLOGY OF NANOPARTICLES

Fundamental Properties - Size Effects on Structure and Morphology of Free or Supported Nanoparticles - Size and Confinement Effects - Fraction of Surface Atoms - Specific Surface Energy and Surface Stress - Effect on the Lattice Parameter - Nanoparticle Morphology - Equilibrium Shape of a Macroscopic Crystal - Equilibrium Shape of Nanometric Crystals - Morphology of Supported Particles.

SUPERPLASTICITY AND REACTIVITY OF METAL NANOPARTICLE

Superplasticity – Introduction – Mechanism - Superplastic Nanostructured Materials - Industrial Applications .Reactivity of Metal Nanoparticles - Size Effects-Structural Properties - Electronic Properties - Reactivity in Chemisorption and Catalysis of Monometallic Nanoparticles - Support Effects - Alloying Effects - Effect of Surface Segregation - Geometric Effects -Electronic Effects- Preparation and Implementation in the Laboratory and in Industry.

SUPRAMOLECULAR CHEMISTRY

Supramolecular Chemistry: Applications and Prospects - From Molecular to Supramolecular Chemistry - Molecular Recognition - Anionic Coordination Chemistry and Recognition of Anionic Substrates - Multiple Recognition Applications and Prospects.

SUPERCritical FLUIDS

Supercritical Fluids –Introduction – Physicochemical Properties – Solubility-Viscosity Diffusion -Thermal Conductivity - Applications – Purification and Extraction - Synthesis.

FEATURES OF NANOSCALE GROWTH

Specific Features of Nanoscale Growth – Introduction - Thermodynamics of Phase Transitions-Dynamics of Phase Transitions - Thermodynamics of Spinodal Decomposition Thermodynamics of Nucleation – Growth - Size Control - Triggering the Phase Transition- Application to Solid Nanoparticles - Controlling Nucleation - Controlling Growth - Controlling Aggregation. Stability of Colloidal Dispersions - Breaking Matter into Pieces.

CHEMISTRY ASPECTS

Photochemistry-Photoconductivity-Electrochemistry of Nanomaterials-Diffusion in Nanomaterials-Nanoscale-Heat Transfer-Catalysis by Gold Nanoparticles – Transport Semiconductor Nanostructures - Nanodeposition of Soft Materials-Nanocatalysis.

**FIRST SEMESTER
ELECTIVE - I
NT 105: 2 GREEN NANOTECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

Periods/week: 4 Th.

Examination (Theory): 3hrs.

Ses. : 30 Exam: 70

Credits: 4

GREENER NANOSYNTHESIS

Greener Nanosynthesis: Greener Synthetic Methods for Functionalized Metal Nanoparticles, Greener Preparations of Semiconductor and Inorganic Oxide Nanoparticles, green synthesis of Metal nanoparticles, Nanoparticle characterization methods.

NANOMATERIALS FOR "GREEN" SYSTEMS

Green materials, including biomaterials, biopolymers, bioplastics, and composites Nanotech Materials for Truly Sustainable Construction: Windows, Skylights, and Lighting. Paints, Roofs, Walls, and Cooling. Multifunctional Gas Sensors, Biomimetic Sensors, Optical Interference Sensors Thermo-, light-, and stimulus-responsive smart materials Nanomaterials

NANOMATERIALS FOR ALTERNATIVE ENERGY

Nanomaterials for Fuel Cells and Hydrogen Generation and storage, Nanostructures for efficient solar hydrogen production, Nanomaterials for Solar Thermal Energy and Photovoltaic. Semiconductor Nanocrystals and Quantum Dots for Solar Energy Applications Nanoparticles for Conducting Heat Transfer

NANOTECHNOLOGY IN REMEDIATION

Nanoremediation: Identification and characterization of Hazardous waste, Nano Pollution, Air-Water - Soil Contaminants, Identification and Characterization of Organic and inorganics, Environmental cleanup technologies. Nanomaterials-Remediation: Nano Membranes, Nano Meshes, Nano Fibres, Nano Clays and Adsorbents, Zeolites, Nano Catalysts, Nano-sensors.

GREEN PLASTICS MANUFACTURING

Introduction to commercial plastics and elastomers -Natural Rubber (NR), modified NR and blends-Polyesters from microbial and plant biofactories (polylactic acid and poly hydroxyalkanoates)- Plastics from vegetable oils - Cellulose and starch based materials -Natural fillers, fibers, reinforcements and clay nanocomposites -Biodegradability, life cycle assessment and economics of using natural materials. Micro and nanofibrillar cellulose- Cellulose is a biodegradable material that has been extensively used in paper production. Production of nanofibrils by wood pulp may lead to a great innovation for paper and packaging industry

FIRST SEMESTER

ELECTIVE - I

NT 105: 3 NANOSCALE MAGNETIC MATERIALS AND DEVICES

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

INTRODUCTION

Magnetic fundamentals –Antiferromagnetic materials – Domains and the magnetization process– Coercivity of fine particles –Magnetic anisotropy at nanoscale; Magnetostriction and the effect of stress; Domains and magnetization process. Electron transport in magnetic multi-layers – Spin polarized electron tunneling – Interlayer exchange coupling – Spin relaxation in magnetic metallic layers and multi-layers - Non-equilibrium spin dynamics in laterally defined magnetic structures.

NANOMAGNETISM

Two-spin channel model - Two terminal spin electronics – Three terminal spin electronics - Spin tunneling - Study of ferromagnetic and antiferromagnet interfaces – Photoemission Electron Microscopy - X-ray Absorption Spectroscopy - X-ray Magnetic Linear Dichroism (XMLD) - X-ray Magnetic Circular Dichroism (XMCD) - Temperature dependence of X-ray Magnetic Dichroism. Field models of magnetization; Exchange model in two dimensions; Magnetic domains and domain walls; Random anisotropy model of amorphous magnet; Landau-Lifshitz equation; Spin waves; Magnetic resonance; Angular momentum and spin; Magnetism of atoms

FABRICATION AND IMAGING

Molecular nanomagnets – Mesoscopic magnetism - Particulate nanomagnets– Geometrical nanomagnets – Fabrication techniques scaling – Characterization using various techniques – Imaging magnetic microspectroscopy – Optical Imaging – Lorentz Microscopy – Electron Holography of Magnetic Nanostructures –Magnetic Force Microscopy.

MAGNETIC DATA STORAGE AND RECORDING

Magnetic data storage – Disk formatting – Partitioning – Hard disk features – Hard disk data transfer modes – Programmed I/O – Direct memory access – Ultra DMA – Data addressing – Standard CHS addressing – Extended CHS addressing – Logical Block Addressing – Magnetic recording- Principles of magnetic recording - Magnetic digital recording - Perpendicular recording - Magneto-Optic recording - Magnetic media – Kerreffect – Faraday Effect

MAGNETIC MATERIALS IN APPLICATIONS

Magnetic sensors and Giant Magnetoresistance - Optically transparent materials - Soft ferrites- Nanocomposite magnets - Magnetic refrigerant – High T_C superconductor – Ferro/biofluids– Biomedical applications of magnetic nanoparticles. Magnetic materials in applications; Magnetoresistive Sensors Based on Magnetic Tunneling Junctions; Magnetoresistive Random Access Memory (MRAM); Emerging Spintronic Memories; Giant Magnetoresistive (GMR) Spin-Valve Biosensors; Semiconductor Spin-Lasers; Spin Logic Devices and magnetic drug delivery; Magnetic materials in memory device.

NT 105: 4 MICRO AND NANO MECHANICS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.
Examination (Theory): 3hrs.

Ses. : 30 Exam: 70
Credits: 4

INTRODUCTION: LINEAR ATOMIC CHAINS:

A model binary molecule (Two, three and N atoms Linear chain), Linear chain with optical modes, Quantum Mechanics and Thermodynamics of the linear chain, Effect of temperature on the Linear chain, Quantum Operators for normal modes.

TWO AND THREE-DIMENSIONAL LATTICES

Crystals, Two – Dimensional Crystals, Three – Dimensional Crystals, Periodic Functions, Bloch's Theorem, Classical Theory of the Lattice, Normal Mode Hamiltonian, Connection to the Classical Continuum Theory of Solids.

STRESS, STRAIN AND ELASTICITY RELATIONS

Relative displacement and Strain, Principal Axes of Strain, Superposition, The Stress Tensor and their properties, Inhomogeneous Stresses and Arbitrary Shapes, Body forces, Classes of Linear Elastic response, Isotropic, Orthotropic, Crystalline and Polycrystalline Materials, Stress – strain relations.

STATIC DEFORMATIONS OF SOLIDS

System of Equations for a static deformable solids, Extensional forces, Flexure of Beams, Euler – Bernoulli Theory of Beams, Torsional Beam, Two and Three Dimensional Problems.

DYNAMIC BEHAVIOR OF SOLIDS & DISSIPATION AND NOISE IN MECHANICAL SYSTEMS

Simple vibrational methods, Dynamical Equations of motion in an isotropic solid, Waves in infinite isotropic solids, Waves in infinite crystalline solids, Waves in semi - infinite isotropic solids, Waves in plates and Waves in rods, Langevin equation, Zener's model of an Anelastic solid, Thermoelastic relaxation, Phonon – phonon Interactions, Dissipation in Nanoscale Mechanical Resonators.

NON-LINEAR EQUATION

Introduction, roots of a non-linear equation and roots of a polynomial of n^{th} degree [incremental search method, method of successive approximations, Newton's method, bisection method, secant method] and convergence study

LINEAR ALGEBRAIC EQUATIONS

Solution of (non-homogeneous) linear algebraic equations, review of matrix algebra, Gauss elimination method, Cholesky's decomposition method, householder method, Gauss-Siedal iterative method; Solution of non-linear algebraic equations, method of successive approximation, Newton's method, modified Newton – Raphson method, secant method

EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors, reduction of generalized Eigen value problem to the standard Eigen value problem, methods for obtaining Eigen values and Eigen vectors

FIRST SEMESTER

ELECTIVE - I

NT 105: 5 NANOIONICS: CONCEPTS AND TECHNOLOGICAL APPLICATIONS

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

INTRODUCTION

Solid state ionics vis-à-vis solid state electronics, Principles of ionic conduction in ordered and disordered nanostructures.

SUPER IONIC MATERIALS

Superionic materials classification – Crystalline anionic and cationic conductors, mixed ionic and electronic conductors, structural factors responsible for high ionic conductivity; Brief review on physical techniques for analysis of ion conducting solids

ION TRANSPORT

Transport properties and Ion dynamics; Ion transport in homogeneous and heterogeneous medium – Ion conducting glasses, ceramics, polymers and composites; Ion Transport Models - Phenomenological models, Free volume theory, Configurational entropy model, Jump relaxation and Ion hopping model, Bond percolation model and Effective medium theory. Concepts and feasibility of ion conducting polymer nanocomposites and nanocrystalline ceramics.

MATERIAL PROBLEMS AND PROCESSING TECHNIQUES

Technological applications of ion conducting solids; Design, Fabrication and Evaluation of Solid State Lithium Batteries, Supercapacitors (EDLC and Redox), Fuel Cells (PEM Fuel cell, SOFC), Gas sensors and display devices. Thermodynamics and mass transport in solid state batteries. Battery performance and electrode kinetics. Double layer and other polarization effects at solid /solid interface; Fuel Cells as micro-power houses, Power conditioning and control of fuel cell systems.

**Ses. : 30 Exam: 70
Credits: 4**

NANO-CMOS SCALING PROBLEMS AND IMPLICATIONS

Design Methodology in the Nano-CMOS Era – Scaling – Overview of Sub-100-nm Scaling Challenges and Subwavelength Optical Lithography – Back-End-of-Line Challenges (Metallization) – Front-End- of-Line Challenges (Transistors) – Process Control and Reliability Lithographic Issues and Mask Data Explosion – New Breed of Circuit and Physical Design – Modeling Challenges– Need for Design Methodology Changes

PRACTICALITIES OF SUBWAVELENGTH OPTICAL LITHOGRAPHY

Simple Imaging Theory – Challenges for the 100-nm Node – e-Factor for the 100-nm Node – Corner Rounding Radius – Resolution Enhancement Techniques: Specialized Illumination Patterns – Optical Proximity Corrections – Sub resolution Assist Features – Alternating Phase-Shift Masks– Physical Design Style Impact on RET and OPC Complexity – Specialized Illumination Conditions – Two-Dimensional Layouts – Alternating Phase-Shift Masks – Mask Costs

PROCESS SCALING IMPACT ON DESIGN MIXED-SIGNAL CIRCUIT DESIGN

Design Considerations – Device Modeling – Passive Components – Design Methodology– Benchmark Circuits – Design Using Thin Oxide Devices – Design Using Thick Oxide Devices– Low-Voltage Techniques – Current Mirrors – Input Stages – Output Stages – Bandgap. References– Design Procedures – Electrostatic Discharge Protection – Multiple-Supply concerns –Noise Isolation–Guard Ring Structures – Isolated NMOS Devices–Epitaxial Material versus Bulk Silicon–Decoupling–Power Busing–Integration Problems – Corner Regions – Neighboring Circuitry

ELECTROSTATIC DISCHARGE PROTECTION DESIGN

ESD Standards and Models – ESD Protection Design – ESD Protection Scheme – Turn-on Uniformity of ESD Protection Devices – ESD Implantation and Silicide Blocking – ESD Protection Guidelines – Low-C ESD Protection Design for High-Speed I/O – ESD Protection for High-Speed I/O or Analog Pins – Low-C ESD Protection Design – Input Capacitance Calculations – ESD Robustness – Turn-on Verification – ESD Protection Design for Mixed-Voltage I/O – Mixed-Voltage I/O Interfaces – ESD Concerns for Mixed-Voltage I/O Interfaces – ESD Protection Device for a Mixed-Voltage I/O Interface – ESD Protection Circuit Design for a Mixed-Voltage I/O Interface – ESD Robustness – Turn-on Verification – SCR Devices for ESD Protection – Turn-on Mechanism of SCR Devices – SCR-Based Devices for CMOS On-Chip ESD Protection

SIGNAL INTEGRITY PROBLEMS IN ON-CHIP INTERCONNECTS

Interconnect Figures of Merit – Interconnect Parasitics Extraction – Circuit Representation of Interconnects – RC Extraction –Inductance Extraction – Signal Integrity Analysis – Interconnect Driver Models – RC Interconnect Analysis – RLC Interconnect Analysis – Noise-Aware Timing Analysis – Design Solutions for Signal Integrity – Physical Design Techniques – Circuit Techniques

Credits: 4**

THE SCHRODINGER'S EQUATION AND ITS MATHEMATICAL IMPLICATION

Development of Time Dependent Schrodinger's equation - Statistical interpretation of wave function - Normalization of wave function – Conservation of total probability, Dynamical variables and Hermitian operators - position, and linear and angular momentum operators – Commutation relations- Ehrenfest theorem - Heisenberg uncertainty principle, Time Independent Schrodinger equation– Properties of energy Eigen functions, Expansion postulate.

BOUND STATES & QUANTUM TUNNELING

Free particle - Momentum Eigen functions, Energy levels of a particle – Infinite square well in one, two, and three dimensions - Density of states – Confined carriers - Electron wave propagation in devices - Quantum confinement - Penetration of a barrier – Tunnel effect - Basic principles of a few effective devices – Resonant tunnel diode, Superlattice , Quantum wire and Dot.

QUANTUM DYNAMICS

Time development of the wave function - Time evolution operator - Schrodinger, Heisenberg, and Interaction pictures of quantum dynamics - Time evolution - Free particle wave packet, One-dimensional harmonic oscillator , Two-state quantum systems.

ANGULAR MOMENTUM

Rotation operators, Angular momentum operators, Commutation rules, Eigenvalues of angular momentum operator, Matrix representations, Addition of two angular momenta, Clebsch-Gordon coefficients.

IDENTICAL PARTICLES AND SCATTERING THEORY

System of Identical particles – Symmetrization of wave functions - Exchange interactions - Free electrons in a metal – Fermi gas - Mutual scattering of two particles – Separation of Schrodinger equation in laboratory and center of mass frames - Scattering of a wave packet, Born approximation, Validity, Partial wave analysis, Phase shift. Quantum theory of Scattering – Differential and total cross sections, Scattering amplitude – Derivation using Green's functions - Born approximation -Scattering by spherically symmetric potentials.

QUANTUM COMPUTATION

Quantum Bits - Single qubit gates - Multiple qubits – Controlled Not gate, Swap gate, Toffoli gate, Bell states - no-cloning theorem - Quantum Teleportation - Deutsch's Algorithm - Deutsch-Jozsa Algorithm - Quantum Fourier transform.

**FIRST SEMESTER
ELECTIVE – I
NT 105: 8 ADVANCED FINITE ELEMENT ANALYSIS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

INTRODUCTION

Introduction to FEM, basic concepts, historical back ground, applications of FEM, general description, comparison of FEM with other methods, Finite elements of an elastic continuum - displacement approach, basic element shapes, interpolation function, generalization of the finite element concept - weighted residuals and variational approaches, Virtual energy principle, Rayleigh – Ritz method, properties of stiffness matrix, treatment of boundary conditions, solution of system of equations, shape functions and characteristics, Basic equations of elasticity, strain- displacement relations. Plane stress and plane strain, Requirements of Convergence, h – refinement and p - refinement

1-D STRUCTURAL PROBLEMS

Axial bar element – stiffness matrix, load vector, temperature effects, Quadratic shape functions and problems, Plane Trusses and Space Truss elements and problems

2-D PROBLEMS

CST, LST, force terms, Stiffness matrix and load vectors, boundary conditions, Isoparametric elements – quadrilateral element, shape functions – Numerical Integration.

Finite element modelling of Axi-symmetric solids subjected to Axi-symmetric loading with triangular elements.

ANALYSIS OF BEAMS AND FRAMES

Hermite shape functions – stiffness matrix – Load vector – Problems related to Beams and Frames

3-D PROBLEMS

Tetrahedran element – Jacobian matrix – Stiffness matrix.

STEADY-STATE SCALAR FIELD PROBLEMS

1D, 2 D Heat conduction, electric and magnetic potentials, field flow. The time domain, semi-descretization of field and dynamic problems and analytical solution procedures.

DYNAMIC CONSIDERATIONS

Dynamic equations – consistent mass matrix – Eigen Values, Eigen vector, natural frequencies – mode shapes – modal analysis.

ANALYSIS OF PLATES

Introduction, Triangular Membrane element, Quadratic Triangle element, Rectangular plate element (in-plane forces), Bending behavior of plates, finite element analysis of plates in bending, triangular plate bending element.

**FIRST SEMESTER
ELECTIVE – II
NT 106: 1 THIN FILM TECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

INTRODUCTION TO THIN FILMS

Technology as a drive and vice versa; Structure, defects, thermodynamics of materials, mechanical kinetics and nucleation; grain growth and thin film morphology; Basics of Vacuum Science and Technology,

THIN FILM GROWTH TECHNIQUES

Introduction – Kinetic theory of gases - gas transport and pumping; vacuum pumps and systems - vacuum gauges - oil free pumping - aspects of chamber design from thin film growth perspectives Physical vapour deposition techniques – Physics and Chemistry of Evaporation - Thermal evaporation – Pulsed laser deposition – Molecular beam epitaxy – Sputtering deposition – DC, RF, Magnetron, Ion beam and reactive sputtering - Chemical methods - Thermal CVD – Plasma enhanced CVD – Spray Pyrolysis–Sol-Gel method– Spin and Dip coating –Electro plating and Electroless plating–Deposition mechanisms - Langmuir Blodgett technique.

CHARACTERIZATION TECHNIQUES

Surface analysis techniques – Auger Electron spectroscopy – Photoelectron Spectroscopy– Secondary Ion Mass Spectroscopy – X-ray Energy Dispersive

Analysis – Rutherford Backscattering spectroscopy - Imaging Analysis Techniques – Scanning Electron Microscopy – Transmission Electron Microscopy – Optical analysis Techniques – Ellipsometry – Fourier Transform Infrared Spectroscopy – Photoluminescence Spectroscopy

ADSORPTION AND DIFFUSION IN THIN FILMS

Physisorption – Chemisorption – Work function changes induced by adsorbates–Two dimensional phase transitions in adsorbate layers – Adsorption kinetics – Desorption techniques. Fundamentals of diffusion – Grain Boundary Diffusion – Thin Film Diffusion Couples - Inter Diffusion-Electro migration in thin films – Diffusion during film growth

STRESS IN THIN FILM

Origin of Thin film stress - Classifications of stress – Stress in epitaxial films– Growth Stress in polycrystalline films – Correlation between film stress and grain structure – Mechanisms of stress evolution – film stress and substrate curvature – Stoney formula – Methods of curvature measurement –Scanning laser method.

MODIFICATION OF SURFACES AND FILMS

Introduction – Laser and their Interactions with Surfaces – Laser modification effects and applications – Laser sources and Laser scanning methods - Thermal analysis of Laser annealing- Laser surface alloying - Ion implantation effects in solids – Energy loss and structural modification– compositional modification - Ion beam modification phenomena and applications

THERMODYNAMICS OF SMALL SYSTEMS

Non-intensivity and Nonextensivity of Nanosystems -The Gibbs Equation for Nanosystems-Statistical Mechanics and Thermodynamic Property Predictions – Standard polymorphisms of controlled nucleation and growth of nanocrystallites from a vitreous state-thermodynamics of polymorphic transformations in non-porous and nanoporous solids.

NANOTHERMODYNAMICS

Different Approaches to Nanothermodynamics-surface thermodynamics-Phase transitions in nanoparticles-quasi chemical description of solid nanoparticles- size dependent interface energy-thermodynamics of confined fluids in nanopores-structural properties of nanoclusters-Hill's approach to Nanothermodynamics-Phase transition in nanosystems-symmetry of fullerenes-PI index of some carbon nanotubes.

NON-EQUILIBRIUM THERMODYNAMICS

Thermostated Dynamical Systems - The Transient Fluctuation Theorem Thermodynamic Interpretation of the Dissipation Function - The Dissipation Theorem- Nonequilibrium Work Relations- Nonequilibrium Work Relations for Thermal Processes - Corollaries of the Fluctuation Theorem and Nonequilibrium Work Relations -Generalized Fluctuation Theorem - Integrated Fluctuation Theorem -Second Law Inequality - Nonequilibrium Partition Identity - The Steady State Fluctuation Theorem- Minimum Average Work Principle .

NONEQUILIBRIUM NANOSYSTEMS

Basics-Nanosystems Driven by Time-Dependent Forces-Jarzynski's Nonequilibrium Work Theorem- Mechanical Nanosystems- Friction in Double-Walled Carbon Nanotubes-Electromagnetic Heating of Microplasmas-Mechanochemical Nanosystems-F1-ATPase Motor-Continuous state description-Discrete state description- Chemical Nanosystems- Chemical Transistor- Chemical Clocks in Field Emission Microscopy-DNA replication.

THERMODYNAMICS OF BIOLOGICAL SYSTEMS

Crystal-melt interfacial energies and solubilities for nanosized systems- Via the Ostwald-Freundlich equation, the size-selective growth process of nanoparticles-Bulk membrane partition- Nanothermodynamics of a Single Molecule- The Concept of Pseudo equilibrium-Cellular and Sub-cellular Systems.

NANO OPTICS

Basic Concepts-Spontaneous Emission- Classical Bound- Radiating Electron-Quantum Mechanical Radiative Decay-Absorption and Emission -Nano-optics and local spectroscopy-. Electromagnetic radiation and its interaction with matter, natural line width and broadening, electronic structures of free atoms and ions, splitting of levels and terms in chemical environment, construction of energy level diagram, relation of energy level diagrams to spectral properties, selection rules and polarization in electronic transitions, vibronic transitions, Franck-Condon principle, electronic spectra of polyatomic molecules, emission spectra, radiative and non-radiative decay.

MOLECULAR SPECTROSCOPIES OF NANOASSEMBLIES

Simplified model for vibrational interactions-Characteristic bands for organic compounds - Attenuated-total reflection (ATR) and grazing incidence angle techniques-Reflection-absorption IR spectroscopy (RAIRS)-The Raman Effect- Lateral and in-depth Resolution of Conventional μ RS- Resonant Raman Spectroscopy (RRS) - Nano-specific Modes- Surface-Enhanced Raman Spectroscopy (SERS)- Nano-Raman- Phase Identification and Phase Transitions in Nanoparticles- Characterizing Carbon Materials with Raman Spectroscopy.

NONLINEAR SPECTROSCOPIES

Absorption saturation and harmonic generation, Second-harmonic generation (SHG) and sum frequency spectroscopy (SFG) - Luminescence up conversion-The use of nonlinear optical methods to obtain infrared spectra of ultra-thin assemblies confined to surfaces.

LUMINESCENCE SPECTROSCOPY

Optical properties of assembled nanostructures-interaction between nanoparticles-Direct and indirect gap transitions-, -Single molecule and single nanoparticles spectroscopy-Dynamic light scattering spectroscopy Fluorimetry and Chemiluminescence - X-ray fluorescence spectrometry- Atomic emission spectroscopy.

ELECTRON SPECTROSCOPIES FOR NANOMATERIALS

X-Ray Beam Effects, Spectral Analysis -Core Level Splitting Linewidths - Elemental Analysis: Qualitative and Quantitative -Secondary Structure ,XPS Imaging -Angle-Resolved - Basic Principles of AES-Instrumentation-Experimental Procedures Including Sample Preparation - AES Modifications and Combinations with other Techniques -Auger Spectra: Direct and Derivative Forms and Applications-Electron energy loss spectroscopy of Nanomaterials.

FIRST SEMESTER
ELECTIVE – II
NT 106: 4 BIONANOTECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Examination (Theory): 3hrs.

Ses. : 30 Exam: 70

Credits: 4

OVERVIEW OF NANOBIONANOTECHNOLOGY

Historical perspective of integration of biology, chemistry and material science opportunities and promises of nanobiotechnology.

BIOLOGICAL MOLECULES AND THEIR ANALYSIS

Complexity and size of biological molecules – DNA, RNA proteins and carbohydrates; Techniques: Biological analysis electrophoretic and chromatographic analysis – basic principles and applications.

SINGLE MOLECULE APPROACHES IN BIOTECHNOLOGY

Fluorescence – spectroscopy-Fluorescent probes for analysis of proteins and nucleic acids. Labeling of proteins and nucleic acids by acids by various fluorescent dyes. Molecular beacons and applications.

MODERN BIOMATERIALS

Proteins, Nucleic acids, Lipids, Polysaccharides.

MICROBIOLOGY AND NANOTECHNOLOGY

Bacteria viruses: Prokaryotic complexity and size distribution; Bacterial cell-to –cell communication, quorum sensing, chemotaxis; Microbial production of inorganic nanoparticles; Gold nanoparticles for imaging and therapy.

MINIATURIZED DEVICES-NANOTECHNOLOGY AND MEDICAL DEVICES

Overview of smart devices for medical field; miniaturized devices for drug delivery; advantages of miniaturized devices; lab on chip concept; epipen; intelligent pill; wobbling gels.

NANOMATERIALS USED IN BIOTECHNOLOGY

Nanoparticles; carbon nanotubes; fullerenes; nanofibres; quantum dots and buckyballs interface with biological macromolecules; Biological perspectives of Nanomaterials: Impact of Nanomaterials in biological process; tolerance by immune systems and toxicity; Nucleic acid Engineering: Modifications of DNA for nanotechnological applications; Nanostructure assembly using DNA.

STRUCTURAL PRINCIPLES OF BIONANOTECHNOLOGY

Natural Bionano-machinery, Hierarchical strategy, raw materials, Protein folding, self-assembly and self- organization, molecular recognition and flexibility.

BIONANOTECHNOLOGY TODAY AND FUTURE

Bionanotechnology Today and Future: Basic capabilities, Nanomedicine today, DNA computers, hybrid materials, artificial life and biosensors.

**FIRST SEMESTER
ELECTIVE – II
NT 106: 5 NANO MATERIALS FOR ENERGY AND ENVIRONMENT
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

ENERGY OVERVIEW

Types of Energy and its utilization- Energy Characteristics, Energy Measures, Fundamentals of environment, Environmental aspects of energy utilization, Public health issues related to environmental pollution, Pollution Standards, environmental impact assessment

NANOMATERIALS USED IN ENERGY AND ENVIRONMENTAL APPLICATIONS AND THEIR PROPERTIES

Evaluation of properties and performance of practical power systems that benefit from optimization of materials processing approaches.

DEVICE APPLICATIONS

Sensors, power semiconductor chips, fuel cells, superconductors, solar cells, energy storage and other alternative power sources. Solar cells, Thin film Si solar cells, Chemical semiconductor solar cells, Dye sensitized solar cells, Polymer solar cells, Nano quantum dot solar cells, Hybrid nano-polymer solar Cells

INTRODUCTION TO FUE CELLS

Fuel Cells, principle of working, basic thermodynamics and electrochemical principle, Fuel cell classification, Fuel cell Electrodes and Carbon nano tubes, application of power and transportation.

ENERGY, HYDROGEN STORAGE AND PRODUCTION

Fuel Cells, Battery, Solar energy Conversion, Nanomaterials in Automobiles.

FIRST SEMESTER
ELECTIVE – II
NT 106: 6 MICRO/NANO COLLIDALS AND EMULSIONS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.
Examination (Theory): 3hrs.

Ses. : 30 Exam: 70
Credits: 4

INTRODUCTION

Definition of nano- and micro- emulsions – Reason for their long term kinetic stability – Practical application in personal care products and cosmetics, healthcare products, pharmaceuticals and agrochemicals – Schematic representation of oil/water and water/oil emulsions – Comparison with micelles and macroemulsions – Methods of emulsification: Pipe flow, static mixers and general stirrers, high-speed mixers, colloid mills and high pressure homogenizers – continuous and batch-wise preparations – turbulent flow.

MECHANISM OF EMULSIFICATION

Role of interfacial energy – Explanation of the high energy required for formation of nanoemulsions – The Laplace pressure concept – Role of surfactants: Reduction in interfacial tension and the effect on droplet size – Gibbs adsorption equation – Interfacial dilational modulus and droplet deformation – Interfacial tension gradients and the Marangoni effect – Solubilization theories: Concept of a duplex film and bending of the interface to form o/w or w/o emulsions – Phase diagrams of ternary systems of water, surfactant and cosurfactant – Concept of normal and inverse micelles – Quaternary phase diagrams of oil/water surfactant and cosurfactant – Solubilization of oil by nonionic surfactants

FORMULATION OF EMULSION

High pressure homogenization and efficiency of preparation – The Phase Inversion Temperature (PIT) principle – Variation of interfacial tension with temperature – Phase diagrams as a function of temperature – Formulation of microemulsions – Selection of microemulsions: Hydrophilic-Lipophilic Balance (HLB) concept – Phase Inversion Temperature (PIT) concept – Cohesive Energy Ratio (CER) concept.

CHARACTERIZATION OF EMULSIONS

Scattering techniques: Time average light scattering – Neutron scattering – Quasi-elastic light scattering (Photon Correlation Spectroscopy (PCS)) – Conductivity and NMR techniques: Conductivity of water/oil microemulsions, percolating and non-percolating emulsions, discontinuous emulsions – Viscosity of emulsions – NMR technique for measurement of self diffusion of all components in emulsions and explanation of the various structures.

STABILITY OF EMULSION

Steric stabilization: Unfavorable mixing of the stabilizing chains – Entropic repulsion – Total energy – Distance curves for sterically stabilized emulsions – Variation of the energy curve with the ratio of adsorbed layer thickness to droplet radius – Thermodynamic stabilization: Reason for combining surfactant and cosurfactant to produce an ultra low interfacial tension – Formation of a model w/o emulsion using 4 steps – Relationship of droplet size to interfacial tension.

**FIRST SEMESTER
ELECTIVE – II**

NT 106: 7 NANOSCALE INTEGRATED COMPUTING

Theory: 4 periods/week

Credits: 4

Internal : 30

External: 70

AN INTRODUCTION TO NANOCOMPUTING

Micro computing era – Transistor as a switch, difficulties with transistors at the nanometer scale– Nanoscale devices – Molecular devices – Nanotubes – Quantum dots – Wave computing – Quantum computing.

QUANTUM COMPUTING

Reversible computations – Quantum computing models – Complexity bounds for quantum computing – Quantum compression – Quantum error correcting codes – Quantum cryptography– Computing with quantum dot cellular automata – Quantum dot cellular automata cell – Ground state computing –Clocking – QCA addition – QCA multiplication – QCA memory – 4-bitprocessor

SPIN-WAVE ARCHITECTURES

Spin wave crossbar – Spin wave reconfigurable mesh – Spin wave fully interconnected cluster– Multi-scale Hierarchical architecture – Spin wave based logic devices – Logic functionality– Parallel computing with spin waves – Parallel algorithm design techniques – Parallel routing and broadcasting – On-Spin wave crossbar – On-Spin wave reconfigurable mesh–On-Spin wave fully interconnected cluster.

MOLECULAR COMPUTING

Switching and memory in molecular bundles – molecular bundle switches – Circuit and architectures in molecular computing – Molecular grafting for silicon computing – Molecular grafting on intrinsic silicon nanowires – Self assembly of CNTs

COMPUTATIONAL TASKS IN MEDICAL NANOROBOTICS

Medical Nanorobot designs – Microbivores – Clottocytes – Chromalloyocytes – Common functions requiring onboard computation – Nanorobot control protocols: Operation protocols– Biocompatibility protocols – Theater protocols – Nanoscale image processing: Labeling problem– Convex Hull problem – Nearest neighbor problem.

**FIRST SEMESTER
ELECTIVE - II
NT 106: 8 COMPUTATIONAL FLUID DYNAMICS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

**Periods/week: 4 Th.
Examination (Theory): 3hrs.**

**Ses. : 30 Exam: 70
Credits: 4**

INTRODUCTION

Finite difference method, finite volume method, finite element method, governing equations and boundary conditions. Derivation of finite difference equations.

SOLUTION METHODS

Solution methods of elliptical equations - finite difference formulations, interactive solution methods, direct method with Gaussian elimination.

Parabolic equations-explicit schemes and Von Neumann stability analysis, implicit schemes, alternating direction implicit schemes, approximate factorization, fractional step methods, direct method with tridiagonal matrix algorithm.

HYPERBOLIC EQUATIONS

Explicit schemes and Von Neumann stability analysis, implicit schemes, multi step methods, nonlinear problems, second order one-dimensional wave equations.

Burgers equations: Explicit and implicit schemes, Runge-Kutta method.

FORMULATIONS OF INCOMPRESSIBLE VISCOUS FLOWS

Formulations of incompressible viscous flows by finite difference methods, pressure correction methods, vortex methods.

TREATMENT OF COMPRESSIBLE FLOWS

Potential equation, Euler equations, Navier-stokes system of equations, flowfield-dependent variation methods, boundary conditions, example problems.

FINITE VOLUME METHOD

Finite volume method via finite difference method, formulations for two and three-dimensional problems.

STANDARD VARIATIONAL METHODS – 1

Linear fluid flow problems, steady state problems,

STANDARD VARIATIONAL METHODS – 2

Transient problems.

FIRST SEMESTER
NT 107 SYNTHESIS OF NANOMATERIALS LAB
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 3

Internal:100

Credits: 3

1. Synthesis of Nanostructures / Nano composites by Sol-gel Process
2. Nano – material Preparation by Chemical methods
3. Methods for the synthesis of nanomaterials and thin film technology (CVD method, Spin Coating, Spray Pyrolysis and Sputtering)
4. Composite preparation by using Ball Milling.

FIRST SEMESTER
NT 108 COMPUTER AIDED MODELING AND SIMULATION

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 3

Internal: 100

Credits: 2

TOOLS

Practical approach to learning operating systems (DOS, UNIX, Windows) and Graphical packages (Origin, Gnuplot)

PROGRAMMING

C and C++: Character set, variables, constants, Data types and their declarations, relational operators, logical operators, arithmetical operations, built in functions, input output statements, functions, subroutine, Array handling.

NUMERICAL METHODS I

Matrices, Solution of system of linear equations, direct methods, error analysis, curve fitting, iterative methods; Numerical differentiation and integration methods, quadrature formula and Monte-Carlo methods, Numerical methods for ordinary equations, stability and convergence.

NUMERICAL METHODS II

Interpolation, extrapolation, Numerical solution of partial differential equation, Initial value problems.

RANDOM NUMBERS

Monte carlo integral methods, importance sampling, fast fourier transform. Physical simulations: N body methods and particle simulations, Verlet algorithm, molecular dynamics and monte carlo methods. Simulation of small system and Ab initio methods.

ARGUS LAB SOFTWARE PRACTICE

Nanotechnology related work practice exercises of Molecular modeling and mechanics *programs*

PURDUE UNIVERSITY PRISM SOFTWARE PRACTICE

Nanotechnology related work practice exercises of MEMS devices *programs*

**CORE SYLLABUS
SECOND SEMESTER
NT 201 CHARACTERIZATION OF MATERIALS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

Periods/week: 4 Th.

Examination (Theory): 3hrs.

Ses. : 30 Exam: 70

Credits: 4

INTRODUCTION AND PRELIMINARY CONCEPTS

Macro-, Meso-, Micro- and Nanostructure of Materials, Fundamentals of crystallography and Crystal structures.

X-RAY DIFFRACTION METHODS

X-ray production, Bragg's Law, Laue's Equation, Diffraction Methods, Single Phase analysis, Multi-Phase Analysis, Particle size and strain, Orientation and Texture, Residual Stress.

OPTICAL MICROSCOPY

Geometry of Optics, Resolution, Construction of a Microscope, Image Contrast, Phase Contrast.

RESONANCE METHODS

Electron Spin Resonance (ESR), Ferromagnetic Resonance (FMR), Nuclear Magnetic Resonance (NMR), Mossbauer Spectroscopy, Thermal Characterization of Materials: DTA, TGA, DSC (Principle and Applications), Determination of thermo physical parameters.

FOURIER TRANSFORMATION INFRARED SPECTROSCOPY

Michelson Interferometer, Sources and Detectors, Fourier Transformations, Moving Mirror, Signal Averaging, Advantages, Computers, Spectra.

PROBE TECHNIQUES

Deep level transient spectroscopy (DLTS), Scanning Probe Microscopy (SPM), Atomic Force Microscopy (AFM), Kelvin-probe measurements. Nanoscale current-voltage (I-V), capacitance-voltage (C-V) relationships.

SCANNING ELECTRON MICROSCOPY

Electron Optics - Cathodes, Electron Lenses, Aberrations, Resolution, Interaction of Electrons and Matter-Elastic and Inelastic Scattering, Backscattered Electrons, Secondary Electrons, Scanning Electron Microscopy - Image Formation, EPMA, Magnification, Depth of Field, Distortion, Detectors, Contrast, and Resolution.

TRANSMISSION ELECTRON MICROSCOPY

Electron diffraction, reciprocal lattice, analysis of SAD patterns; different electron diffraction techniques. Electron Microscopy, EDS: X-ray microanalysis: Energy dispersive X-ray spectroscopy (EDS) and Quantitative microanalysis using EDS.

CORE SYLLABUS
SECOND SEMESTER
NT 202 MICRO AND NANO FABRICATION
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

MEMS &NEMS

Materials Aspects of Micro Electro Mechanical Systems (MEMS) and Nano Electro Mechanical Systems (NEMS) Silicon, Germanium-Based Materials, Metals, Harsh Environment Semiconductors, GaAs, InP, and Related III-V Materials, Ferroelectric Materials and Polymer Materials.

BASIC MICROFABRICATION TECHNIQUES

Lithography, Thin Film Deposition and Doping, Etching and Substrate Removal, Substrate Bonding.

SELF ASSEMBLY AND ANALYSIS

Process of self assembly, semiconductors islands, monolayers, nature of catalysis, porous materials, pillared clays, colloids, biometrics.

MEMS FABRICATION TECHNIQUES

Bulk Micromachining, Surface Micromachining, High-Aspect-Ratio Micromachining.

NANOFABRICATION TECHNIQUES

E-Beam and Nano-Imprint Fabrication, Epitaxy and Strain Engineering, Scanned Probe Techniques, Self-Assembly and Template Manufacturing.

STAMPING TECHNIQUES FOR MICRO AND NANO-FABRICATION

High Resolution Stamps, Microcontact Printing and Nanotransfer Printing, Applications of printing techniques, Unconventional Electronic Systems, Lasers and Waveguide

CORE SYLLABUS
SECOND SEMESTER
NT 203 POLYMER NANOCOMPOSITES
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

INTRODUCTION OF NANOCOMPOSITES

Nanocomposites, Definition, Nanocomposites past and present, Nomenclature, Solids - Atomic and molecular solids, Role of statistics in materials, Primary, secondary and tertiary structure, Transitions.

PROPERTIES AND FEATURES OF NANOCOMPOSITES

Physics of modulus, Continuum measurements, Yield, Fracture, Rubbery elasticity and viscoelasticity, Composites and nanocomposites, Surface mechanical properties, Diffusion and permeability, Features of nanocomposites, basics of polymer nano composites - Nanoreinforcements, Matrix materials, Hazards of particles

NANOCOMPOSITES

Metal-Metal nanocomposites, Polymer-Metal nanocomposites, Ceramic nanocomposites: Dielectric and CMR (Collosion Magneto Resistance) based nanocomposites. (One example for each type).

FABRICATION/PROCESSING OF NANOCOMPOSITES

Viscosity, Types of flow, Viscosity- Experimental viscosity, Non-newtonian Flow, Low-viscosity processing, Solvent processing, Particle behavior, Direct Mixing, Solution Mixing, In-situ polymerization, In-Situ Particle Processing Ceramic/Polymer Composites, In-Situ Particle Processing Metal/Polymer Nanocomposites, Modification of Interfaces, Post-Forming, Hazards of solvent Processing, Melt, high -shear, and direct processing, Melting and softening, Melt processes with small shears or Low, shear rates flow, Melt processes with large deformations or high-shear rates, Thermo-kinetic processes.

CHARACTERIZATION OF NANOCOMPOSITES

Introduction to characterization, Experiment design, Sample preparation, Imaging, Structural characterization, Scales in nanocomposites, Texture, Electromagnetic energy, Visualization, Physicochemical analysis, Characterization of physical properties, Identification, Mechanical, Surface mechanical, Exposure, Barrier properties, Recipes and standards

APPLICATIONS OF NANOCOMPOSITES

Nanocomposites, Optical, structural applications, Nanoparticulate systems with organic matrices, Applications, Biodegradable protein nanocomposites, Applications of Polypropylene nanocomposites, Application as exterior automatic components, Hybrid nanocomposite materials, Application for corrosion protection, Applications of Nanopolymers in Catalysis.

Examination (Theory): 3hrs.

Credits: 4

INTRODUCTION

Fundamentals of kinetic theory-molecular models, micro and macroscopic properties, binary collisions, distribution functions, Boltzmann equation and Maxwellian distribution functions-Wall slip effects and accommodation coefficients, flow and heat transfer analysis of microscale Couette flows. Fundamentals of cooling, Fundamentals of nanofluids, Making nanofluids, Mechanisms & Models for enhanced thermal transport, Future research.

SYNTHESIS OF NANOFUIDS

General issues of nanofluids, Synthesis methods-common issues, Study of nanoparticles, Variety in nanomaterials, Micro emulsion based methods for nanofluids, Solvo thermal synthesis, Synthesis using supports, Synthesis using biology, Magnetic nanofluids, Inert gas condensation, Anisotropic nanoparticles, Other nanofluids, summary.

CONDUCTION HEAT TRANSFER IN NANOFUIDS

Conduction heat transfer, Measurement of thermal conductivity of liquids, Thermal conductivity of oxide nanofluids, Temperature dependence of thermal conductivity enhancement, Metallic nanofluids, nanofluids with CNTs.

THEORETICAL MODELING OF THERMAL CONDUCTIVITY OF NANOFUIDS

Simple mixture rules, Maxwell approach, Particle distribution, Particle geometries, Symmetrical equivalent medium theory, Matrix particle interfacial effects, Dynamic models of thermal conductivity of nanofluids.

CONVECTION IN NANOFUIDS

Fundamentals of convective heat transfer, convection in suspensions & slurries, Convection in nanofluids, Analysis of convection in nanofluids, Numerical studies of convection in nanofluids.

BOILING OF NANO-FLUIDS

Fundamentals of boiling, Pool boiling of nanofluids, Critical heat flux in pool boiling of nanofluids, other investigations related to boiling of nanofluids.

APPLICATIONS AND FUTURE DIRECTIONS

Liquid cooling, Applied research in nano cooling, Further research.

THE SCIENCE OF MINIATURIZATION

Moore's Laws (1,2,&3) and technology' Roadmap–clean rooms Processing Methods: Cleaning – Oxidation – Lithography – Etching- – CVD – Diffusion – Ion implantation – metallization – state of the art CMOS architectures Photolithography Overview – Critical Dimension – Overall Resolution– Line-Width – Lithographic Sensitivity and Intrinsic Resist Sensitivity (Photochemical Quantum Efficiency) – Resist Profiles – Contrast and Experimental Determination of Lithographic Sensitivity – Resolution in Photolithography – Photolithography Resolution Enhancement Technology

NANOSTRUCTURING BY PHYSICAL TECHNIQUES

Next-Generation Technologies: – State-Of-The-Art (including principles, capabilities, limits, applications) EUV lithography – Phase-shifting photolithography – X-ray lithography – Electron Beam Direct Writing System – Focused ion beam (FIB) lithography – Neutral atomic beam lithography – Plasma-Aided Nanofabrication – Soft Lithography – Nanosphere Lithography– Nanoimprint – Dip-pen nanolithography – key consequences of adopted techniques

NANOMANIPULATION AND PROCESSING

Scanning tunneling microscopy (STM) – Atomic force microscopy (AFM) – Near-field scanning optical microscopy (NSOM) – Advanced Techniques: Embossing and surface passivation, Dimensional Subtraction and Addition, Multistep Processing, of -Microcontact printing– Molding – implications and applications of the conventional and advanced techniques

NANOMETER DEVICES

Material Wave Nanotechnology: Nanofabrication Using a de Broglie Wave-Electron Beam Holography – Atomic Beam Holography- Nanometer Lithography Using Organic Positive/Negative Resists – Sub-10 nm Lithography Using Inorganic Resist – 40 nm-Gate-Length Metal-Oxide-Semiconductor Field-Emitter-Transistors-14 nm Gate-Length Electrically Variable Shallow Junction MOSFETs-Operation of Aluminum-Based Single-Electron Transistors at 100 Kelvin's- Room Temperature Operation of a Silicon Single-Electron Transistor

SUB-LITHOGRAPHIC ARCHITECTURES

Fundamental scaling limits to the transistors – Beyond CMOS: Self-Assembled structures– Gravitational field assisted assembly – Template-assisted assembly- Shear force assisted assembly- Electroforming and Molding (LIGA) – Fundamentals of Quantum Computing – Quantum Algorithms - Realizing quantum computers – Physical Implementations (Josephson junction Circuits and semiconductor quantum dots).

**SECOND SEMESTER
ELECTIVE – III
NT 205: 2 NANOTOXICOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)**

Periods/week: 4 Th.

Examination (Theory): 3hrs.

Ses. : 30 Exam: 70

Credits: 4

POSSIBLE HEALTH IMPACT OF NANOMATERIALS

Sources of Nanoparticles; Epidemiological Evidence; Entry Routes into the Human Body – Lung, Intestinal Tract, Skin ; Nano particle Size - Surface and Body Distribution; Effect of Size and Surface Charges; Nanoparticles, Thrombosis and Lung Inflammation ;Nanoparticles and Cellular Uptake; Nanoparticles and the Blood-Brain Barrier.

NANOMATERIALS FOR ENVIRONMENTAL REMEDIATION

Introduction- Nanoparticle-based Remediation Materials - Acid-Base Chemistry - Redox Chemistry- Field Deployments of ZVI - Absorption Chemistry - Hybrid Nanostructured Remediation Materials- Self-assembled Monolayer's on Mesoporous Supports (SAMMS) - Functional CNTs.

BIOTOXICITY OF METAL OXIDE NANOPARTICLES AND CARBON NANOTUBES

Introduction; Nanoparticles in the Environment; Nanoparticles in Mammalian Systems; Health Threats; Nanomaterials and Biotoxicity; Iron Oxide; Titanium Dioxide; Dark Studies; UV Irradiation Studies; Other Metal Oxides; Toxicological Studies and Toxicity of Manufactured CNTs- case study; Toxicity of CNTs and Occupational Exposure Risk; Toxicity of MWCNTs/SWCNTs and Impact on Environmental Health.

TOXICOLOGY OF NANOPARTICLES IN ENVIRONMENTAL POLLUTION

Air Pollution; Introduction to Air Pollution Particles; Adverse Effects of PM in Epidemiological Studies; Role of Nanoparticles in Mediating the Adverse Pulmonary Effects of PM; Effects of Nanoparticles on the Cardiovascular System; Nanoparticle Translocation and Direct Vascular Effects; Endothelial Dysfunction and Endogenous Fibrinolysis; Coagulation and Thrombosis; Cardiac Autonomic Dysfunction; Effects of Nanoparticles on the Liver and Gastrointestinal Tract; Effects of NP on the Nervous System.

DOSIMETRY, EPIDEMIOLOGY AND TOXICOLOGY OF NANOPARTICLES

Epidemiological Evidence for Health Effect Associations with Ambient Particulate Matter; Toxicological Evidence for Ambient Particulate Matter Induced Adverse Health Effects; Inhaled Nanoparticle Dosimetry; Toxicological Plausibility of Health Effects Caused by Nanoparticles; Integrated Concept of Risk Assessment of Nanoparticles.

**SECOND SEMESTER
ELECTIVE – III
NT 205: 3 NANOTECHNOLOGY BUSINESS APPLICATION AND
COMMERCIALIZATION**

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

OVERVIEW

Introduction – types of nanobusinesses – ease of entry – intellectual property–ethics– risks/dangers – standardization, investors and commercialization centers–business applications – social aspects of nanotechnology

MARKET LANDSCAPE

Nanotechnology landscape and commercially attributable sectors - Tools to map, understand and segment the nanotechnology marketplace–Potential nanotechnology end-users and applications– Global market for nanotechnology products – Attracting venture capital –How to liaise effectively with partners - academy-industry relationship –University and employee’s inventions

COMMERCE AND REGULATION

Frameworks for developing nanotechnology marketplace –Incentives for Commercial applications– Shaping the Nanotech Marketplace- Allocating Costs associated with Risks – Public perception of nanotechnology – Critical impact of Regulation of Nanotechnology – Environment, health and safety within the nanotechnology industry–Developments that could influence the nanotechnology market – Impact for Future technologies

BUSINESS STRUCTURES

Relationship b/w technology development and new business creation– the company concepts– new technology–new opportunity– sole proprietorships– general and limited partnerships– professional and closed corporations

MATERIALS PROCESSING ECONOMICS

Comparison and projection of yield– manufacturing output– labor and equipment expenses to calculate and estimate costs – relative performance enhancements for materials processing– alternate approaches– Identification of equipment– facilities and overheads – specific manufacturing methods– Tools to estimate the economics of process– Addressing the effect of overall system costs – its benefits

SECOND SEMESTER
ELECTIVE – III
NT 205: 4 SOCIAL IMPACTS IN NANOTECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

PROTECTION & REGULATION FOR NANOTECHNOLOGY

Patentability requirements-riding the patent office pony-infringement issues-nanotech patents outside the united states-copyright requirements-nanotech creation as artist works-Delegation of power of agencies-Examples of regulation of nanotechnology-environmental regulations-regulation of exports-political and judicial control over agency action.

LIABILITY LEGAL ASPECTS OF NANOTECHNOLOGY

The applications of civil & criminal laws-civil liability, application of negligence to nanotechnology, strict liability for nanotechnology products-warranty-class actions-nanotechnology business organization-criminal liability

ECONOMIC IMPACTS AND COMMERCIALIZATION OF NANOTECHNOLOGY & SOCIAL SCENARIOS

Introduction -Socio-Economic Impact of Nanoscale Science: Initial Results and Nanobank-Managing the Nanotechnology Revolution: Consider the Malcolm Baldrige National Quality Criteria -The Emerging NanoEconomy: Key Drivers, Challenges, and Opportunities-Transcending Moore's Law with Molecular Electronics and Nanotechnology- Navigating Nanotechnology Through Society -Nanotechnology, Surveillance, and Society: Methodological Issues and Innovations for Social Research-Nanotechnology: Societal Implications: Individual Perspectives-Nanotechnology and Social Trends-Five Nanotech

ETHICS, LAW & GOVERNANCE

Ethics and law-Ethical issues in Nanoscience and Nanotechnology: Reflections and suggestions -Ethics and Nano: A survey-Law in a New Frontier- An Exploration of Patent Matters Associated with Nanotechnology -The Ethics of Ethics -Negotiations over Quality of Life in the Nanotechnology Initiative. Governance-Problems of Governance of Nanotechnology -Societal Implications of Emerging Science and Technologies: A Research Agenda for Science and Technology Studies (STS)-Institutional Impacts of Government Science Initiatives - Nanotechnology for National Security.

PUBLIC PERCEPTIONS & EDUCATION

Public Perceptions-Societal Implications of Nanoscience: An Agenda for Public Interaction Research -Communicating Nanotechnological Risks- A Proposal to Advance Understanding of Nanotechnology's Social Impacts - Nanotechnology in the Media: A Preliminary Analysis-Public Engagement with Nanoscale Science and Engineering -Nanotechnology: Moving Beyond Risk-Communication Streams and Nanotechnology: The (Re)Interpretation of a New Technology- Nanotechnology: Societal Implications — Individual Perspectives-Historical Comparisons for Anticipating Public Reactions to Nanotechnology.

SECOND SEMESTER
ELECTIVE – III
NT 205: 5 FUEL CELL TECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

INTRODUCTION

Fuel cell; brief history of fuel cells, types of fuel cells and fuel cell applications.

THERMODYNAMICS AND ELECTROCHEMICAL KINETICS

Engineering thermodynamics, conversion efficiencies of heat engines and fuel cells, chemical reactions, chemical thermodynamics and electrochemical kinetics.

FUEL CELL COMPONENTS AND THEIR IMPACT ON PERFORMANCE

General design features, fuel cell performance: the MEA and the current/voltage curve, MEA components and the fuel cell stack.

STACK DESIGN

Sizing of a fuel cell stack, stack configuration, uniform distribution of reactants inside each cell, heat removal from a fuel stack and stack clamping.

FUEL CELL MODELING

Theory and governing equations, modeling domains and modeling examples.

FUEL CELL SYSTEM DESIGN

Hydrogen-air system, fuel cell systems with fuel processor, electrical subsystems and system efficiency.

FUEL CELL APPLICATIONS

Transportation applications, stationary power, backup power and fuel cells for small portable power.

SECOND SEMESTER
ELECTIVE – III
NT 205: 6 COMPUTATIONAL NANOTECHNOLOGY
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

INTRODUCTION

Computational simulation, need for discrete computation.

CLASSICAL MECHANICS

Mechanics of Particles, D'Alembert's principle and Lagrange's equation, variational principles, Hamilton's principle, conservation theorems and symmetry properties, central force problems, virial theorem.

STATISTICAL MECHANICS

Review of probability and statistics, quantum states of a system, equations of state, canonical and microcanonical ensemble, partition function, energy levels for molecules, equipartition theorem, minimizing the free energy, partition function for identical particles, Maxwell distribution of molecular speeds.

ATOMISTIC SIMULATION TECHNIQUES

Molecular Dynamics (MD): Introduction, inter-atomic potential function, Lennard-Jones potential, MD simulation – equilibration and property evaluation, various types of potential functions, computational aspects, introduction to advanced topics.

MONTE CARLO (MC) METHOD

Introduction, Metropolis algorithm, advanced algorithms for Monte Carlo simulations, comparison with Molecular Dynamics.

MESOSCOPIC SIMULATION TECHNIQUES

Lattice Boltzmann Method (LBM): Boltzmann equation, derivation of the hydrodynamic equation from Boltzmann equation, Lattice Boltzmann equation and LBM, applications of LBM.

SCIENTIFIC SOFTWARE FOR CHARACTERIZATION

Simple scientific software using Matlab, Mathematica, mechanics, optics and quantum Mechanics, Atomistix and related software, Introduction to Labview software, Rietveld analysis for X-ray diffraction, Curve fitting analysis.

DISSIPATIVE PARTICLE DYNAMICS (DPD)

Fundamentals of DPD simulations, time step size and noise, repulsion parameter, approximate expressions for transport coefficients. Introduction to Multiscale methods and applications.

SECOND SEMESTER

ELECTIVE – III

NT 205: 7 NANOMATERIALS FOR SOLAR ENERGY AND PHOTOVOLTAICS

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

SOLAR RADIATIONS AS ENERGY AND MECHANISM

Solar radiations as a source of energy and mechanism for its entrapment; Measurements and limits of solar energy entrapment; Flat plate collectors and solar concentrators; Solar energy for industrial process heat (IHP) and design of solar green house; Solar refrigeration and conditioning; Solar thermo-mechanical power.

ENERGY STORAGE DEVICES

Introduction of energy storage/conversion devices, State-of-the art status of portable power sources, Solar/photovoltaic (PV) cells as a source of green energy; Fundamentals, Materials,

DESIGN OF PHOTO VOLTAIC CELLS

Design and Implementation aspects of PV energy generation and consumption; Solar cell technologies (Si-wafer based, Thin film, GaAs based, dye-sensitized, PESC and organic solar cells), Efficiency of solar cells and PV array analysis, Photovoltaic system design (stand alone and grid connected) and applications;

EMPHASIS OF STORAGE BATTERIES

Balance of system (BOS) with emphasis on role of storage batteries; Cost analysis, Case study for performance evaluation and problem identification in wide-spread commercialization of the technology.

SECOND SEMESTER

ELECTIVE - III

NT 206: 8 ADVANCED MECHANICS OF COMPOSITE MATERIALS

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

BASIC CONCEPTS AND CHARACTERISTICS

Geometric and Physical definitions, natural and man-made composites, Aerospace and structural applications, types and classification of composites.

REINFORCEMENTS

Fibres – Glass, Silica, Kevlar, carbon, boron, silicon carbide, and boron carbide fibres. Particulate composites, Polymer composites, Thermoplastics, Thermosets, Metal matrix and ceramic composites.

MICROMECHANICS

Unidirectional composites, constituent materials and properties, elastic properties of a lamina, properties of typical composite materials, laminate characteristics and configurations. Characterization of composite properties.

COORDINATE TRANSFORMATION

Hooke's law for different types of materials, Hooke's law for two dimensional unidirectional lamina, Transformation of stress and strain, Numerical examples of stress strain transformation, Graphic interpretation of stress – strain relations. Off – axis, stiffness modulus, off – axis compliance.

ELASTIC BEHAVIOR OF UNIDIRECTIONAL COMPOSITES

Elastic constants of lamina, relation ship between engineering constants and reduced stiffness and compliances, analysis of laminated composites, constitutive relations.

STRENGTH OF UNIDIRECTIONAL LAMINA

Micro mechanics of failure, Failure mechanisms, strength of an orthotropic lamina, strength of a lamina under tension and shear maximum stress and strain criteria, application to design. The failure envelope, first ply failure, free-edge effects. Micro mechanical predictions of elastic constants.

ANALYSIS OF LAMINATED COMPOSITE PLATES

Introduction thin plate theory, specially orthotropic plate, cross and angle ply laminated plates, problems using thin plate theory.

**SECOND SEMESTER
ELECTIVE – IV
NT 206: 1 RESEARCH METHODOLOGY - ENGINEERING AND MANAGEMENT
STUDIES**

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

RESEARCH METHODOLOGY

Research methodology – definition, mathematical tools for analysis, Types of research, exploratory research, conclusive research, modeling research, algorithmic research, Research process- steps. Data collection methods- Primary data – observation method, personal interview, telephonic interview, mail survey, questionnaire design. Secondary data- internal sources of data, external sources of data.

SCALES AND MEASUREMENTS

Scales – measurement, Types of scale – Thurstone’s Case V scale model, Osgood’s Semantic Differential scale, Likert scale, Q- sort scale. Sampling methods- Probability sampling methods – simple random sampling with replacement, simple random sampling without replacement, stratified sampling, cluster sampling. Nonprobability sampling method – convenience sampling, judgment sampling, quota sampling.

HYPOTHESES TESTING

Hypotheses testing – Testing of hypotheses concerning means (one mean and difference between two means - one tailed and two tailed tests), Concerning variance – one tailed Chi-square test.

SAMPLE TESTS

Nonparametric tests- One sample tests – one sample sign test, Kolmogorov-Smirnov test, run test for randomness, Two sample tests – Two sample sign test, Mann-Whitney U test, K-sample test – Kruskal Wallis test (H-Test)

ANALYSIS AND REPORT

Introduction to Discriminant analysis, Factor analysis, cluster analysis, multidimensional scaling, conjoint analysis. Report writing- Types of report, guidelines to review report, typing instructions, oral presentation.

SECOND SEMESTER
ELECTIVE – IV
NT 206: 2 ADVANCED OPTIMIZATION TECHNIQUES
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

GEOMETRIC PROGRAMMING (G.P)

Solution of an unconstrained geometric programming, differential calculus method and arithmetic method. Primal dual relationship and sufficiency conditions. Solution of a constrained geometric programming problem (G.P.P), Complementary Geometric Programming (C.G.P)

DYNAMIC PROGRAMMING(D.P)

Multistage decision processes. Concepts of sub optimization and Principal of optimality, computational procedure in dynamic programming calculus method and tabular methods. Linear programming as a case of D.P. and continuous D.P.

INTEGER PROGRAMMING(I.P)

Graphical representation. Gomory's cutting plane method. Bala's algorithm for zero-one programming problem. Branch-and-bound method, Sequential linear discrete Programming, Generalized penalty function method.

Stochastic Programming (S.P.): Basic Concepts of Probability Theory, Stochastic Linear programming.

NON-TRADITIONAL OPTIMIZATION TECHNIQUES

Multi-objective optimization - Lexicographic method, Goal programming method, Genetic algorithms, Simulated annealing, Neural Networks based Optimization.

SECOND SEMESTER

ELECTIVE – IV

NT 206: 3 COMPUTATIONAL METHODS IN FLUID FLOW AND HEAT TRANSFER (Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

EXPERIMENTAL, THEORETICAL AND NUMERICAL METHODS

Experimental, theoretical and numerical methods of predictions; physical and mathematical classifications partial differential equations; computational economy; numerical stability; validation of numerical results; round-off-error and accuracy of numerical results; iterative convergence, condition for convergence, rate of convergence; under – and over – relaxations, termination of iteration; tridiagonal matrix algorithm; discretization – converting derivatives to their finite difference forms – Taylor’s series approach, polynomial fitting approach; discretization error.

STEADY ONE-DIMENSIONAL CONDUCTION

Steady one-dimensional conduction in Cartesian and cylindrical coordinates; handling of boundary conditions; two – dimensional steady state conduction problems in Cartesian and cylindrical co-ordinates– point-by-point and line-by-line method of solution, dealing with Dirichlet, Neumann, and Robins type boundary conditions; formation of discretized equations for regular and irregular boundaries and interfaces; grid generation methods; adaptive grids.

ONE-, TWO, AND THREE-DIMENSIONAL TRANSIENT HEAT CONDUCTION PROBLEMS

One-, two, and three-dimensional transient heat conduction problems in Cartesian and cylindrical co-ordinates – explicit, implicit, Crank-Nicholson and ADI schemes; stability criterion of these schemes; conservation form and conservative property of partial differential and finite difference equations; consistency, stability and convergence for marching problems; discrete perturbation stability analysis, Fourier or von Neumann stability analysis.

SECOND SEMESTER
ELECTIVE – IV
NT 206: 4 NANOTECHNOLOGY IN HEALTH CARE
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

NANOTECHNOLOGY FOR DISEASE DIAGNOSTICS

Quantum dot conjugation strategies with DNA-aptamer, Protein and Antibody and FRET/BRET based assays for Cancer, AIDS, tuberculosis and other disease diagnostics; Nanoparticle assisted multiplexed diagnostic assays (Bio-barcode amplification assay, Sandwich DNA assay, Eliza) and point-of care diagnostics (Lateral flow assay).

NANOTECHNOLOGY FOR DRUG DELIVERY

Lipid, polymeric, Hyaluronic acid and heparin functionalized core shell nanoparticle as drug delivery vehicles; Carbon nanotube-based vectors for delivering immunotherapeutics and drugs, Hydrogels for drug delivery, nanoparticle induced Gene delivery for gene therapy.

NANOTECHNOLOGY FOR THERAPY

Nanodrugs for treatment of cancer (abraxane and other drugs); concept of nanodrug-encapsulation, self assembly, controlled release (targeted and triggered release), nanoparticle recovery; modified Ag-nanoparticle for Photodynamic Therapy of cancer; nanoparticle assisted vaccine development; nanoshells for surgical procedures.

NANOMACHINES AND NANOBARCODES, NANOBIOSENSORS

DNA Nanomachines for Molecular Diagnostics-Nanobarcodes Technology - Nanobarcode Particle Technology for SNP Genotyping - Qdot Nanobarcode for Multiplexed Gene Expression Profiling-Biobarcode Assay for Proteins Single-Molecule Barcoding System for DNA Analysis Nanoparticle-Based Colorimetric DNA Detection Method Cantilevers as Biosensors for Molecular Diagnostics –CarbonNanotube Biosensors -FRET-Based DNA Nanosensors. Ion Channel Switch Biosensor Technology - Electronic Nanobiosensors -Electrochemical Nanobiosensors -Quartz Nanobalance Biosensors -Viral Nanosensors –PEBBLE Nanosensors - Microneedle-Mounted Biosensors Optical Biosensors- Nanowire (NW) Biosensors -Nanoscale Erasable Biodetectors

NANOPHARMACEUTICALS

Introduction -Nanobiotechnology for Drug Discovery -Gold Nanoparticles for Drug Discovery - Use of Quantum Dots for Drug Discovery -Nanolasers for Drug Discovery -Cells Targeting by Nanoparticles with Attached Small Molecules -Role of AFM for Study of Biomolecular Interactions for Drug Discovery Nanoscale Devices for Drug Discovery -Nanotechnology Enables Drug Design at Cellular Level Nanobiotechnology-Based Drug Development - Dendrimers as Drugs- Fullerenes as Drug Candidates -Nanobodies Nanobiotechnology in Drug Delivery –Nanoscale Delivery of Therapeutics - Nanosuspension Formulations Viruses as Nanomaterials for Drug Delivery - Nanoparticle-Based Drug Delivery -Trojan Nanoparticles - Self-Assembling Nanoparticles for Intracellular Drug Delivery -Nanoparticle Combinations for Drug Delivery Liposome's -Liposome–Nanoparticle Hybrids-Nanospheres-Nanotubes – Nanocochleates-Nanomolecular Valves for Controlled Drug Release-Nanomotors for Drug Delivery.

ROLE OF NANOTECHNOLOGY IN BIOLOGICAL THERAPIES

Introduction - Development of nano medicines – Nano Shells – Nano pores – Tectodendrimers– Nanoparticle drug system for oral administration – Drug system for nasal administration – Drug system for ocular administration – Nanotechnology in diagnostic application. Preformulation Studies: on various dosage forms such as tablets, capsules, suspension, creams, emulsion, Injectables, ophthalmic and aerosols etc. Biomedical nanoparticles – Liposome's – Dentrimers – Different types of drug loading – Drug release – Biodegradable polymers – Applications

Nanobiotechnologies for Single-Molecule Detection -Protease-Activated Quantum Dot Probes -
Nanotechnology for Point-of-Care Diagnostics -Nanodiagnosics for the Battle Field -
Nanodiagnosics for Integrating Diagnostics with Therapeutics

APPLICATION IN CANCER THERAPY & NANOMEDICINE

Introduction and Rationale for Nanotechnology in Cancer Therapy -- Passive Targeting of Solid Tumors: Pathophysiological Principles and Physicochemical Aspects of Delivery Systems - Active Targeting Strategies in Cancer with a Focus on\Potential Nanotechnology Applications- Pharmacokinetics of Nanocarrier-Mediated Drug and Gene Delivery - Multifunctional Nanoparticles for Cancer Therapy- Neutron Capture Therapy of Cancer: Nanoparticles and High Molecular Weight Boron Delivery Agents. Nano-Oncology- Nanoneurology- Nanocardiology- Nano-Orthopedics-Nano-Ophthalmology

**SECOND SEMESTER
ELECTIVE – IV
NT 206: 5 NANOTECHNOLOGY INTELLECTUAL PROPERTY RIGHTS AND
INNOVATION**

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

BACKGROUND

Introduction: the invisible infrastructure of innovation-Intellectual Property Dynamics in Society- The types of Intellectual Property- Patent documents-the construction of the patent, face of the patent, conception, body of the patents - The innovation cycle- The rise of the intellectual property system- Balancing the tension between exclusive rights and the accessible domains

BASICS OF MANAGING INTELLECTUAL PROPERTY IN ORGANIZATIONS

The innovation forest: intellectual property rights and how they grow- The ABCDs of intellectual property: flow and infringement of IP rights-the patent system - copyrights-trademarks-trade secrets- The global diversity of innovation communities-The role of the innovation chief.

NANOTECHNOLOGY POLICY AND REGULATION

Understanding Nanotechnology- the industrial structure giving rise to Nanotechnology- Societal and Ethical Implications-Environmental Regulation - National Security and Export Controls- Federal Funding- Conclusions

THE ECONOMIC AND LEGAL FOUNDATIONS

A Brief Digression into Terminology - Understanding Open Source – Credit Unions - Open Source: An Analogy - The Role of Open Source Licenses - Different Types of Open Source Licenses- Law and Code - Intellectual

Property and Market Failure - Evaluating the System

STRATEGIC MANAGEMENT OF INTELLECTUAL PROPERTY

A menu of strategy options, -Evaluating internal resources and the external environment – Placing a financial value on IP assets - Accessing innovations of others - Protecting and enforcing IP rights- Transferring IP rights - Strategies on a Global Stage- Specific IP strategies for different communities- Global challenges

SECOND SEMESTER
ELECTIVE – IV
NT 206: 6 NANOPOLLUTION AND E-WASTE MANAGEMENT
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Ses. : 30 Exam: 70

Examination (Theory): 3hrs.

Credits: 4

ANALYSES OF NANOPARTICLES IN THE ENVIRONMENT

Compositional Analysis - Single Particle Mass Spectrometer - Particle-Induced X-Ray Emission (PIXE) - Surface Area: Product Characterization and Air Monitoring - The Brunauer Emmett Teller (BET) Method. Epiphaniometer - Aerosol Diffusion Charger - Size Distribution-Electrostatic Classifiers.- Real-Time Inertial Impactor: Cascade Impactors- Electrical Low Pressure Impactor (ELPI) - Dynamic Light Scattering (DLS) - Workplace Air Monitoring-Condensation Particle Counter (CPC) - Surface Area: Total Exposure-Sampling and Analysis of Waters and Soils for Nanoparticles.

ENVIRONMENTAL FATE AND TRANSPORT.

Nature of Nanomaterials in the Environment - Physical Manifestation of Nanomaterials: Particle Size Distribution and Formation of Mobile Suspensions - Chemical Forces Acting on Nanomaterials - Electrostatic or Coulomb Force-van der Waals Forces - Solvency Force-Implications of Polymorphism - Predicting the Behavior of Nanomaterials in the Environment-Predicting Temporal Reaction Rates: Chain Interactions - Predicting Temporal Reaction Rates: Estimating Particle Affinities - Nanoparticle Affinity and Inter-Particle Force Fields - Coulomb Energy- van der Waals Energy-Prediction of Probability of Product Formation.

POTENTIAL ECOLOGICAL HAZARDS OF NANOMATERIALS

Underlying Principles of Ecological Exposure, Effects, and —Risk—Terrestrial vs. Aquatic Ecosystems - Risk and Hazard – Toxicity – Exposure -Factors That Can Affect the Toxicology of Nanomaterials -Toxicity of Nanomaterials - Exposure to Nanomaterials - Sources and Routes of Exposure - Exposure and Dose - Anticipated Hazards To Terrestrial Ecosystems - Anticipated Hazards to Aquatic Ecosystems - Methodologies for Evaluating Hazards and their Limitations.- Recommendations for Managing the Risks of Future Nanomaterials and their Production.

E-WASTE MANAGEMENT

WEEE – The Scale of the Problem - Legislative Influences on Electronics Recycling - Producer Responsibility Legislation - The WEEE Directive - The RoHS Directive - Other Examples of Legislation - Treatment Options for WEEE - Material Composition of WEEE-Socio-economic Factors - Logistics of WEEE- WEEE – the International Perspective - European Perspective-Japan - Barriers to Recycling of WEEE - The Recycling Hierarchy and Markets for Recyclate - WEEE Health and Safety Implications .

INTEGRATED APPROACH TO E-WASTE RECYCLING

Recycling and Recovery Technologies - Sorting/Disassembly-Crushing/Diminution –Separation - Emerging Recycling and Recovery Technologies - Automated Disassembly - Comminution - Separation - Thermal Treatments - Hydrometallurgical Extraction - Dry Capture Technologies - Biotechnological Capture - Sensing Technologies - Design for Recycling and Inverse - Manufacturing - Printed Circuit Boards - Sector-based Eco-design .

SECOND SEMESTER

ELECTIVE – IV

NT 206: 7 INDUSTRIAL NANOTECHNOLOGY

(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.

Examination (Theory): 3hrs.

Ses. : 30 Exam: 70

Credits: 4

OVERVIEW OF INFORMATION STORAGE AND NANOTECHNOLOGY

Different types of information storage materials and devices: solid state memory, optical memory, magnetic recording, emerging technologies, role of nanotechnology in data storage.

OPTICAL DATA STORAGE

Write and read techniques (signal modulation, disk format, data reproduction), read and write principles (read-only, write-once, phase-change, magneto optic disks), optical pickup heads (key components, diffraction-limited laser spot, focusing and tracking error signals, servo loop design, actuator), optical media, near field optical recording, holographic data storage.

NANO PHARMACEUTICALS

Generation and significance of Nano pharmaceuticals like Nanosuspension, nanogels, Nanocarrier systems, Nano formulation, Nano-incapsulation, Enhancement of drug therapy epitaxy

INDUSTRIAL APPLICATIONS OF NANOMATERIALS

Nanoparticles and Micro-organism, Nano-materials in bone substitutes & Dentistry, Food and Cosmetic applications, Textiles, Paints, Catalysis, Drug delivery and its applications, Biochips-analytical devices, Biosensors.

NANOELECTRONIC& NANOCOMPUTER ARCHITECTURES AND NANOTECHNOLOGY

Introduction to nanoelectronic and nanocomputers, Quantum DOT cellular Automata (QCA), Single electron circuits, molecular circuits Nanocomputer Architecture.

SECOND SEMESTER
ELECTIVE – IV
NT 206: 8 NANOTECHNOLOGY IN POLYMERS
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 4 Th.
Examination (Theory): 3hrs.

Ses. : 30 Exam: 70
Credits: 4

INTRODUCTION TO POLYMERIC MATERIAL

Introduction – polymers nanotechnology, origin, classification and formation of polymers, micro structures in polymers – polymer length, molecular weight, amorphous and crystalline, challenges of polymers in nanotechnology – polymers in top – down and bottom – up nanotechnology.

CONDUCTING POLYMERS

General description – poly(acetylene)s – synthesis , structure and morphology- theory of conductivity, Conduction mechanism, uses – poly(pyrrole)s- poly(aniline)s, poly(phenylene)s - polymers with metals in the side group structure.

POLYMER FUNCTIONALITY

Nanostructuring polymers - polymer nanofibers - multifunctional polymer nanocomposite from polymerization - nanofilled polymeric fibers, polymers/clay nanocomposites.

TEXTILE APPLICATIONS

Introduction – electrospinning- production of non woven mat from electrospinning - controlling the parameter and morphology of nanofibers - electro static self assembled nanolayer films nanocomposite fibers – Nanofibers in mask and tissue engineering Applications.

ORGANIC ELECTRONIC APPLICATIONS

Printing and patterning techniques - Nanoscale behavior in organic transistors - transition of sensing response by organic transistor from micro to nanoscale - organic field effect transistor sensor - flexible organic light emitting diode.

SECOND SEMESTER
NT 207 – CHARACTERIZATION OF NANOMATERIALS AND NANO STRUCTURES
(Four-Semester Course - CBCS- w.e.f. 2015-2016)

Periods/week: 3
Credits: 3

Internal:100

1. X-ray Diffraction measurements of Nano Crystallites
2. Nanoparticle size analysis
 - a. Scanning Electron Microscopy
 - b. Atomic Force Microscopy
 - c. Scanning Tunneling Microscopy
