

ANDHRA UNIVERSITY

Regulations and Syllabus relating to
Master of Technology (M.Tech.) Degree Courses (Part-Time – Self Finance)

In
REMOTE SENSING
(w.e.f. the admitted Batch of 2007-2008)

M.Tech. Remote Sensing course

An applicant for admission into the M.Tech. Remote Sensing should have at least a second class degree with not less than 55% marks in either:

B.E. / B.Tech in any engineering
OR
Master's degree in science

- A) A regular course of study means attendance is not less than 75 per cent of lectures, practical, drawing exercises, workshop and practical and field and project work, if any, in such semester in such subject, according to the scheme of Instruction to be notified by the Head of the Institution, provided that in special cases for sufficient cause again the Vice-Chancellor may on the recommendation of the Principal, condone the deficiency in attendance, not exceeding 10 per cent, for reasons of ill-health when the application is submitted at the time of the actual illness and is supported by an authorized Medical Officer approved by the Principal.
- B) However, in the case of students, who participate in activities, such as NCC, Inter-University Tournaments, National Tournaments Inter University Courses. NSS and any such other activities deemed genuine by the Head of the Department Concerned, the period of their absence for the above purpose can be condoned by the Principal on the recommendation of the Head of the Department.
- A) There shall be a written examination at the end of each of the first two semester in the subjects offered in the respective semesters.
- B) The candidates are required to submit, at the end of the third semester, three copies (as prescribed) of the dissertation on or before a date to be notified by the University from time to time, accompanied by three copies of a short summary, all of which will be retained by the University.

C) At the end of the third semester, there shall be (1) an evaluation of the dissertation, and (2) a viva voce on the dissertation and related subjects.

D) Marks for sessional work shall be allotted by the Teaching Staff of the college on the basis of class work, slip tests, practical works, etc., and the list of marks shall be sent to the Registrar, before the commencement of the written examination.

E) For taking the examination in the theory in any subject candidates shall be required to obtain a minimum of 50 per cent in sessional work in that the subject, failing which, they shall be required to repeat the course in that subject in the semester in which it is offered again for study.

F) Candidates who fail to secure the minimum prescribed marks in that subject will be permitted to continue the studies in the next semester. They shall, however, be required to pass the examination in the subjects in which they have failed, in the subsequent examination.

G) Candidates who have secured not less than 40 per cent in any of the theory papers and not less than 50 per cent of the total maximum marks of the theory paper and sessionals put together shall be declared to have passed the examination in that subject. In the case of subjects in which no written examination is prescribed, candidates should secure 50 per cent of the marks allotted to each of these subjects.

A) The evaluation of project work / Research work will be done by conducting viva voce examination at the end of third semester by a Board of Examiners consisting of :

Head of the Department

Chairman, Board of Studies

The Internal Research Director

One or two experts from outside the Department / University nominated by the Vice-Chancellor.

The dissertation shall be either "recommended", or "Not recommended".

Candidates who have passed all the subjects of the course and secured not less than 60 per cent of the aggregate of marks, shall be declared to have passed in first class. All the remaining successful candidates shall be declared to have passed in second class.

Candidates who fail in the subjects of any semester will be deemed to have been conditionally promoted. They shall however, have to appear and pass only in the subjects in which they have failed. Candidates have to take the examination in the subjects in which they have failed during these semesters, when the University conducts the examinations in those subjects.

M.Tech. Remote Sensing (Part-time)

Scheme of Instructions /Examinations as per credit system w.e.f. admitted batch 2007-2008.

Code No.	Name of the course	Periods per week		Examination Duration Hours	Max. marks		Credit
		Lectures	Lab.		Semester end examination	Sessional	
I SEMESTER							
RSP 101	Mathematics & Statistics	4	-	3	70	30	4
RS P102	Computer Fundamentals	4	-	3	70	30	4
RS P103	Computer programming in 'C' Lab	-	6	3	70	30	3
RS P104	Map Analysis Practicals	-	6	3	70	30	3
II SEMESTER							
RS P201	Earth Systems	4	-	3	70	30	4
RS P202	Principles of Photogrammetry and Photo Interpretation	4	-	3	70	30	4
RS P203	Principles of Remote Sensing	4	-	3	70	30	4
RS P204	Geographic Information System	4	-	3	70	30	4
RS P205	Photo interpretation and Remote Sensing Practical	-	6	3	70	30	3
RS P206	Geographic Information system Practicals	-	6	3	70	30	3
III SEMESTER							
RSP 301	Digital Image Processing	4	-	3	70	30	4
RSP 302	Remote Sensing Applications	4	-	3	70	30	4
RSP 303	Satellite Meteorology Agriculture and Oceanography	4	-	3	70	30	4
RSP 304	1) Coastal Zone Management (or) 2) Natural Disaster Management (Elective)	4	-	3	70	30	4
RSP 305	Digital Image Processing Practicals	-	6	3	70	30	3
RSP 306	Satellite Meteorology, Agriculture and Oceanography Practicals	-	6	3	70	30	3
IV SEMESTER							
PROJECT/ DISSERTATION WORK AND VIVA-VOCE							12
Total Credits							70

SEMESTER I
Course No. RSP 101 - Mathematics and Statistics

Unit-1

Fundamentals: Sets and Subsets, Sequences, Operations on Sets; Counting sequences, and subsets (permutations and combinations) Algorithms and Pseudocode: Induction and Recursion: Division in the integers: Matrices

Unit-2

Relations and Digraphs; Product sets & Paths in Relations & Digraphs; Properties of Relations; Equivalence Relations; Computer Representation and Digraphs; Manipulation of Relations; Transitive closure and Warshall's Algorithm.

Unit-3

a) Functions;

Functions - The Pigeonhole principle; Permutations

b) Trees & Languages

Trees; Labeled Trees; Language; Representation of special grammars and Languages;
Tree searching; Undirected Trees

Unit-4

Measurement of Central Tendency, Mean, Mode, Median, Geometric mean and Harmonic Mean.

Measures of variations - Range, Quintile deviations, Mean deviation, Standard deviation and variance, Coefficient of variations.

Probability concepts - Additions and multiplication laws, Basic problems on these laws. Concept of random variables and probability distribution.

Unit-5

1. Theoretical distribution; Binomial, Poisson and normal with application.
2. Correlation Analysis - Introduction, Karl Pearson's Coefficient of Correlation, Auto Correlation.
3. Regression Analysis - Linear regression analysis; Curve fitting concept of multiple regression analysis.
4. Theory of Sampling - Meaning of a sample, Universe, static and parameters. Sampling distribution, standard error. Different sampling techniques like simple random sample, standard random sample, systematic, cluster and multi-stage sample.

Text Books

- 1) Statistics by S.P. Gupta
- 2) Statistical theory and methods by SANCHETIC and Kapoor
- 3) Statistics by S.C.Gupta

Course No. RSP 102 - Fundamentals of Computers

Unit-1

Introduction to Computers / Data representation, Conversion of data. Memory organization, Different secondary storage devices and Magnetic media devices - Magnetic tape; CCTs, DATs, Cartridges, Magneto-optical disks, CDs (read and write) ZIP drives, PHDs (Pocket Hard Disks), Floppies and DVDs.

Data Representation - Representation of Characters in Computers, Representation of Integers, Representation of Fractions, Hexadecimal Representation of Numbers, Decimal to Binary Conversion, Error Detecting Codes.

Computer Memory - Memory Cell, Memory Organization, Read-only Memory, Serial Access Memory, Physical Devices used to Construct Memories, Magnetic hard Disk, Floppy Disk Drives, Magnetic Tape Drives.

Unit-2

Binary Arithmetic, Complement representation, Boolean functions, Registers, I/O Devices Types and Printers.

Processor - Structure of Instructions, Description of a Processor, A Machine Language Program. An Algorithm to Simulate a Hypothetical Computer.

Logic Circuits - Introduction. Switching Circuits, And / Or Operations, NOT operation, Boolean Functions, Postulates, Duality Principle, Theorems, Precedence of Operators, Venn Diagram, Truth Table, Canonical Forms for Boolean Functions, Logic Circuits, Parallel and Serial Adders, Physical Devices used to Construct Gates, Transistors, Integrated Circuits.

Unit-3

Operating System Concepts, Structures, Files, Directories, Process and Memory management.

Unit-4

Concepts of analysis of algorithms, fundamentals of data structures, arrays, stacks and queues.

Unit-5

Fundamentals of object oriented programming concepts: Design and Analysis. Computer Graphics: Fundamentals of Computer Graphics.

Text Books

1. Fundamentals of data structures by Horowitz F and Sahani S
2. Modern Operating Systems by Andres S Tanenbanm
3. Fundamentals of computers. V. Rajaraman

Course No. RS 103 - Computer Programming in 'C' Practical

1. Introduction
2. Control Statements
3. Arrays
4. Functions
5. Storage classes
6. Pointer variables
7. Structures and Union
8. Command line Arguments
9. File Hard ling
10. Processor Devices & Data structures using C

Course No. RSP 104

Map Analysis Practical

1. Study of topographic maps
2. Morphometric analysis of a drainage basin
3. Slope analysis of a drainage basin
4. Analysis rainfall data
5. Estimation of evaporation and evapotranspiration
6. Determination of various meteorological instruments and data collection
7. Visit to meteorological data collection platform (INSAT)

SEMESTER II

Course No. RSP 201 - Earth Systems

Unit-1

- a) Earth - Orbit, Rotation, Time
- b) Oceans - Depth, Bottom relief
- c) Oceans - Temperature, Salinity, Density of seawater
- d) Oceans - Waves, Tides, Currents
- e) Climate and the atmosphere - scope, origin and nature, composition & vertical division of the atmosphere.

Unit-2

- a) Meteorological parameters and their measurements - pressure, temperature, wind, precipitation, humidity, and radiation.
- b) Geographical, seasonal and vertical distribution of temperature, pressure, wind and precipitation.
- c) Solar and terrestrial radiation: Distribution in clear, cloudy and average conditions. Mean heat balance. Role of ozone, water vapour and carbon dioxide.
- d) Weather disturbances: Air mass and Front, Cyclone and anti-cyclone. Thunderstorm and tornado.

Unit-3

- a) Climate and agricultural factors in crop production.
- b) Monsoons : Concepts of the origin of monsoon - Indian Monsoons
- c) Fundamental concepts of Geomorphology
- d) Weathering, Mass wasting and erosion.

Unit-4

- a) Wind and associated land forms
- b) Oceans and associated land forms
- c) Land forms associated with faults and folds
- d) Rivers and associated land forms
- e) Glaciers associated land forms

Unit-5

- a) Soil & Regolith, Soil forming processes, Soil profile, Soil components.
- b) Pedogenic regimes.
- c) Classification of soils
- d) Soils of India

List of Text Books

1. Structural Geology by Billings, M. 1984
2. Earth History & Plate Tectonics by Carl K. Seyfert, Leslie A. Sirkin
3. Geology of India & Burma by M.S. Krishna 6th, Ed.
4. General Climatology by H.J. Critchfield
5. Physical Geology by Arthur Holmes
6. Physical Geography by Stahler

Course No. RSP 202 Principles of Photogrammetry and Photo interpretation**UNIT- I**

Fundamentals of Photogrammetry and Photo interpretation – types of photographs; Vertical photographs – principal point; scale; Stereoscopy; Vertical exaggeration – factors involved and determination; Overlap, sidelap and flight planning

UNIT- II

Geometric elements of vertical aerial photographs; Relief Displacement on vertical aerial photographs; Parallax and parallax measurement – monoscopic and stereoscopic methods; Determination of horizontal ground length, direction and angles from photo coordinates;

UNIT - III

Aerial mosaics: comparison with maps; Elements of aerial photo interpretation – (a) landforms; (b) surface drainage patterns; (c) erosion features, (d) gray tones; (e) miscellaneous elements.

UNIT - IV

Digital Photogrammetry: definition and scope; Photographs and images; Geo-referencing – Interior orientation, exterior orientation; aerotriangulation – single frame and block triangulation - pass points, tie points; ground control points; Satellite photogrammetry

UNIT - V

3-D surface modeling – DEMs, DSMs and DTMs; Triangulated irregular networks; Gridded surfaces; interpolation methods; Contour representation; Terrain visualization; DEM user applications.

Text Books

1. Aerial photographic interpretation, Lueder, D.R., McGraw Hill Book Co., 1959
2. Elements of Photogrammetry, Paul R. Wolf, McGraw-Hill, 2000
3. Remote sensing and Image interpretation, Lillesand and Keifer, John Wiley and Sons, 1987
4. Manual Photogrammetry, McGlone, C., Edward, M. and Bethel, J, American Society for Photogrammetry and Remote Sensing, Bethesda, Maryland, USA. 2005
5. Digital Elevation Model Technologies and Applications: The DEM user Manual, David F. Maune (ed), American Society for Photogrammetry and Remote Sensing, Bethesda, Maryland, USA, 2001
6. Leica Photogrammetry Suite – Orthobase and Orthobase Pro User Guide, Leica Geosystems, GIS & Mapping, Atlanta, USA, 2003.

Course No. RSP 203 – Principles of Remote Sensing

Unit-I Basics of Remote Sensing

Principles of Remote sensing, History of Remote sensing, Remote sensing in India,

- Electromagnetic Radiation and Electromagnetic Spectrum, EMR quantities: Nomenclature and Units
- Thermal Emission of Radiation, Radiation Principles (Plank's Law, Stephen Boltzman law), Interaction of EMR with the Earth Surface (Wien's displacement law, Kirchoffs Law)
- Spectral signature, Reflectance characteristics of Earths cover types, Remote sensing systems.

PLATFORMS AND SENSORS

Platforms, Remote sensing sensors, resolutions Across track and along the track scanning, Optical sensors,

- Thermal scanners
- Microwave sensing radar
- satellite missions: Landsat series, SPOT series, IRS satellite series, IKONOS, Metrological satellites

Unit-II a) Data reception, Data processing & Data generation

- Ground station, Data generation, Data processing & correction

Radiometric and Geometric corrections

- Radiometric corrections Random noise correction
- Atmospheric correction, Geometric errors and corrections,
- Distortion evaluated from tracking data, distortion evaluated from ground control Image correction.

Ground Investigation in support of Remote sensing

- Uses of ground data, calibration correction, Interpretation of properties, Training sets, Accuracy evaluation, test sites
- Ground truth Instruments and spectral signature,
- techniques and Instruments, Global Positioning system (GPS) – Fundamentals location Information,
- Spectral Reflectance and spectral signature of vegetation

Unit-III Microwave Remote Sensing

- Introduction - Electromagnetic spectrum, Airborne and Space borne radar systems basis instrumentation.
- System parameters - Wave length, Polarization, Resolutions, Radar geometry.
- Target parameters - Back scattering, Point target, Volume scattering, Penetration, Reflection, Bragg resonance, Cross swath variation. Speckle radiometric calibration.
- Radar - Grametry - Introduction, Mosaicing Stereoscope.
- Application : Geology, Forestry, Land use, Soils etc. Future trends and Research

Unit-4 Thermal Imaging system

Thermal Imaging System: Introduction - IR region of the Electromagnetic spectrum, Atmospheric transmission, Kinetic and radiant temperature, Thermal properties of materials, Emissivity, Radiant temperature. Thermal conductivity. Thermal capacity, thermal inertia, Apparent thermal inertia, Thermal diffusivity.

IR - radiometers, Airborne and Satellite TTR scanner system

Characteristics of IR images

- i) Scanner distortion,
- ii) image irregularities,
- iii) Film density and recorded
- iv) Temperature ranges

Effects of weather on images

- i) Clouds, ii) Surface winds, iii) Penetration of smoke plumes

Interpretation of thermal imagery

- Advantages of Thermal imagery

Unit-V : Image Interpretation

- Introduction to image Interpretation
- Basic principles of Image Interpretation
- Elements of Image Interpretation
- Techniques of image Interpretation
- Interpretation Keys
- Methods of searching and sequence of Interpretation
- Methods of analysis and Reference levels
- Computer compatible tapes – Band sequential format, Band interleaved by Line format, Run-length encoding format.
- Hardcopy outputs – Generation of B/W and False Colour Composites. Generally supported scales of the data products, Information about annotation of the products.

List of Text Books

1. Floyd, F. Sabins, Jr: Remote Sensing Principles and Interpretation, Freeman and Co., San Francisco, 1978.
2. Illesand and Kiefer: Remote Sensing and Image interpretation, John qwiley, 1987.
3. Manual of Remote Sensing Vol. I&II, 2nd Edition, American Society of Photogrammetry.
4. Remote Sensing: The quantitative approach, P.H. Swain and S.M. Davis, McGraw Hill.
5. Introductory Digital Image Processing: A remote sensing perspective, John R. Jensen, Prentice Hall.
6. Imaging Radar for Resource Survey: Remote Sensing Applications, 3, W Travelt, Chapman & Hall.
7. Remote sensing Notes –Edited by Japan Associates of Remote sensing- JARS 1999

Course No. RSP 204 - Geographic Information Systems

Unit-1

- a) Introduction to Data base systems - Data base system levels of abstraction in DBMS principles of data base. Model of real world. Introduction to data organization, information management system preliminary study of INGRES, ORACLE, RDBMS and DBASE.
- b) Introduction to Geographical Information Systems: Introduction maps and spatial information. Computer assisted mapping and map analysis. Geographic Information Systems. The components of geographical Information System. Future directions and trends in GIS.

Unit-2

- a) Data structures for thematic maps. Data structures for Geographic Information Systems. Points, lines and areas. Definition of a map Geographic data in the computer. File and data processing, data base structures, perceived structures and computer representation and geographical data. Raster data structure, Vector data structures for geographical entities. Data structures for thematic maps - The choice between raster and vector.

- b) Digital Elevation Models: The need of DEMs, methods of representing DEMs. Image methods, data sources and sampling methods for DEMs. Products that can be derived from a DEM. Automated landform delineation from DEMs.
- c) Map projections inGIS

Unit-3

- a) Data input, verification, storage and output: Data input, data verification, correction and storage data output; data user interfaces.
- b) Methods of Data Analysis and Spatial Modeling: Introduction, definition of the database. Simple data retrieval. A general approach to map overlay, Cartographic modeling using natural language commands. Linking command sequences into cartographic models, advantages and disadvantages of cartographic modeling in land evaluation and planning.

Unit-4

- a) Data Quality, Errors and Natural Variation: Sources of error, Errors resulting from natural variation of from original measurements. Errors arising through processing, problem; and errors arising from overlay and boundary intersections. Errors resulting from rasterizing a vector map. Errors associated with overlaying two or more polygon networks. The nature of boundaries. The statistical nature of boundaries. Combining attributes from overlaid maps.
- b) Classification methods: Classification, Multivariate analysis and classification, allocating individuals to existing classes. Expert systems for Geographical Information Systems. Classification methods in geographical information systems.

Unit-5

- a) Methods of Spatial interpolation. The available methods for interpolation, global methods of interpolation, local interpolators, optimal interpolation methods using spatial auto covariance. Extensions of krigging to large areas. Comparing krigging with other interpolation techniques. Choosing a Geographic Information System. Designing the needs for GIS. The procedure to following when setting up a geographical information system.
- b) Tools for Map analysis: Single maps, Map reclassification, operations and attribute tables, spatial topological and geometric modeling and operations on spatial Neighborhood. Tools for map Analysis: Map pairs, map overlay and map modeling correlation between two maps. Tools for map analysis: Multiple maps, types of models, Boolean logic models, Index overlay models, Fuzzy logic methods.

List of Text books

1. Principles of Geographical Information System for Land Resource Assessment, P.A. Burrough, Clarendon Press, Oxford, 1986.
2. Geographic Information Systems, T.R. Smith & Piquet, London Press, 1985.
3. Principles of data base systems, J.D. Ullman, Computer Science Press.

RSP 205 Photointerpretation and Remote Sensing Practicals

Testing stereo vision

Use of Lens stereoscope and Mirror stereoscope

Determination of vertical exaggeration

Use of Parallax Bar for height calculation from aerial photographs

Calculation of scale of the photographs

Marking Principal point and conjugate principal point on the stereopairs

Preparation of aerial mosaics

Interpretation of aerial photographs for identification of landforms of fluvial, Aeolian, glacial, coastal, volcanic and arid processes

Identification of tectonic elements from aerial photographs

Digital photogrammetry – digital image matching and collection of mass points

Construction digital terrain models

Application of DTMs – contour generation; fill; fly through; slope and aspect; watershed analysis; watershed and drainage extraction; volumetric analysis; preparation of orthoimages.

Study of Remote Sensing Imagery for :

1. Identification of geological, geomorphologic and cultural forms (IRSIA & 1B)
2. Water resources studies (TMIRS & SPOT)
3. Environmental Impact assessment (SPOT)
4. The student should select a theme for visual interpretation and prepare a practical report as one of the inputs to the practical examination assessment.

RSP 206 - Geographic Information Systems (GIS) Practical

1. Familiarity with D Base Commands including record updating and processing.
2. Theme representation by usage of graphics command resources data maintenance - Theme filling and retrieval and usage.

Exercise: Development / updating of data base management software packages for a selected practical problem using available GIS package.

Arc-info, Arc-View practice and ILWIS software packages

Creation of different spatial layers.

Map analysis.

SEMESTER III
Course No. RSP 301 - Digital Image Processing

Unit-1

- a) Introduction - Image processing display systems.
- b) Initial statistical extraction - univariate and multivariate statistics, histograms and its significance in remote sensing data.
- a) Preprocessing - Introduction, missing scan lines, desk tripping methods, geometric correction and registration, atmospheric corrections, illumination and view angle effects

Unit-2

- a) Image reduction, image magnification, contrast enhancement; linear, non-linear, rationing, edge enhancement; linear, non linear. low pass filters, high pass filters, edge detection, , point and neighborhood operation
- a) Image transform - Arithmetic operations' based image transforms, principal component analysis, discriminate analysis. Fourier transforms, Fast Fourier frequency domain filters and vegetation indices.

Unit-3

Image compression fundamentals: Coding, interpixel and Psycovisual redudency, and fidelity criteria.

Image compression models: Source encoder and decoder, channel encoder decoder.

Elements of information theory: Measuring information, the information channel, fundamental coding theorms and using information theory.

Unit-4

- a) Image segmentation: Detection of points, lines and edge detection and combined detection
- b) Edge linking and boundary detection: local processing, Global processing via Hough transform
- c) Thresholding: foundation, role of illumination, simple global thresholding, optimal thresholding . Split and merge and Texture based Segmentation.

Unit-5

Classification - Geometrical basis of classification, unsupervised classification, supervised classification techniques - training sample selection, parallelepiped classifier, cancroids classifier, maximum likelihood method, Hybrid methods and decision - tree classifiers. Use of external data, contextual information, feature - sub-feature study, classification accuracy. Change detection - the nature of change detection, change detection algorithms, image differencing, and image rationing classification comparisons.

Hyper spectral remote sensing, Imaging Spectroscopy, Data Processing techniques-N-Dimensional Scatter plots, Spectral angle mapping, Spectral mixture analysis

List of Text Books

1. Introductory digital image processing - A Remote Sensing perspective, John RJenson, Prentice Hall, 1986.
2. Raja Raman V., Elements of Parallel computing, Prentice Hall, 1990.
3. Charles R. Giardina and Edward R., Doloughenly, Morphological Methods in Image and Signal processing, Prentice Hall.
4. Computer Processing of Remote Sensed Images, Paul M. Mather, John Wiley & Soins, 1987.
5. Rosenfeld A. and A.C. Kak, Digital Picture Processing, New York – Academic Press, 1976.
6. Pratt. W.K. Digital Image Processing Wiley Intersciences, 1976.

7. Kalhwang and Douglas Degroot, parallel processing for super computers and artificial intelligence, McGraw-Hill, 1980.
8. Rafael C. Gonzalez, Richard E. Woods Digital Image Processing, 1993.

Course No. RS 302 - Remote Sensing Applications

Unit-1

1. Scope of Remote Sensing applications - potentials and limitations
2. Resource mapping and integrated information for sustainable development
3. Resource evaluation: Soils, minerals forest and agriculture.
4. Fundamental concepts of GPS, Various segments, Observation principle and signal Structure, Basic concepts of GPS Receiver and its components, Classification of GPS receivers.

Unit-2

Applications in land use and land cover analyses

1. Land use classification principles and systems
2. Mapping and monitoring of land use / land cover and regional planning
3. Urban land use, Urban sprawl and urban planning.

Unit-3

Water Resource Applications

1. Mapping, monitoring of surface water bodies, tanks, lakes / reservoirs
2. Snowmelt forecasting, Rainwater harvesting, Quantification
3. Hydrogeomorphic mapping, ground water zoning from unconsolidated, semi-consolidated and hard rocks.
4. Groundwater quantification

Unit-4

Coastal and near shore applications

1. Satellite sensors for Coastal zone environment
2. Coastal landforms and evolution
3. Coastal dynamics and shore line changes
4. Coastal wetland and Bioresources

Unit-5

Environmental applications

1. Mapping and monitoring of Natural hazards
 - a) Cyclones / floods
 - b) Droughts
 - c) Landslides
 - d) Volcanoes
 - e) Earthquakes
2. Analysis of human-induced hazards
 - a) Pollution
 - b) Deforestation
 - c) Erosion
 - d) Siltation
 - e) Degradation of water bodies and wetlands

Text Books

1. Applied Remote Sensing, C.P. Lo, Longman, Scientific and Technical Publishers
2. Remote Sensing in hydrology, Engman, E.T. Gurney, R.J.
3. Remote Sensing in water management in command areas, Govardhan, V.
4. Satellite oceanography, An introduction for oceanographers and Remote Sensing Scientists, I.R. Robinson, Ellis Horwood series marine sciences.
5. Remote Sensing - Principles and Interpretation, Sabins F.F. Freeman & Co., 1987.

Reference material

1. Satellite meteorology Techniques and applications, Vol. I and Vol. 2, Edited by B.M. Rao, et. al.

Course No. RSP 303 Satellite Meteorology and Agriculture & Oceanography

Unit-1

1. Fundamentals of Remote Sensing in Meteorology
2. Meteorological satellite characteristics and their orbits, TIROS, NIMBUS, NOAA, TIROS N, SEASAT, GOES, METEOSAT, INSAT. Role of LANDSAT, SPOT and IRS in collecting meteorological, agricultural and oceanographic data.
3. Measurement of Earth and Atmospheric energy and Radiation budget parameters from satellites.
4. Atmospheric temperature retrieval techniques and surface radiation studies.
5. Wind measuring techniques from satellite data.

Unit-2

1. Cloud classification techniques.
2. Satellite Remote Sensing System of use in rainfall monitoring and monitoring methods: Cloud indexing method, Life-history method and Bio-spectral methods.
3. Interpretation of Satellite meteorological images for weather systems and cyclones.
4. Remote Sensing techniques for estimation of soil moisture and evapotranspiration.
5. Spectral behavior of different crops and vegetation in VIS, NIR, MIR, TIR and Micro-wave regions.

Unit-3

1. Principles of crop identification and area estimation, sampling techniques, vegetation indices and crop yield modeling using Remote Sensing.
2. Water management in command areas - monitoring, assessing crop water availability, demand and utilization pattern through Remote Sensing.
3. Crop stress assessment and monitoring - droughts and floods.
4. General concept of water resource assessment and irrigation water management, water logging and water quality.

Unit-4

1. Principles of Remote Sensing of Sea
2. Visible wavelength ocean - color sensors: introduction to color sensors on Landsat, Coast zone color scanner (CZCS) on Nimbus, application and oceanographic uses of Land sat and CZCS data.
3. Introduction to infrared scanning radiometers, atmospheric correction and Sea - Surface temperature calibration techniques, interpretation and uses of SST data from satellites.
4. Passive microwave radiometers: Physical principles of passive microwave radiometry microwave radiometer design and oceanographic interpretation of microwave data.

Unit-5

1. Satellite altimetry of sea - surface topography: Application of altimetry to the study of ocean currents, tides, bathymetry and wave heights.
2. Active microwave sensing of sea-surface roughness: Introduction to the Remote Sensing of sea-surface roughness, radar reflection from sea surface, surface films and oil slicks, dynamical and artificial causes of sea surface roughness patterns.
3. Introduction to Synthetic Aperture Radar, Principles of operation, SAR imaging of ocean waves, observations of ocean waves with Seasat SAR, Interpretation of ocean waves.
4. Introduction to microwave scatter meters, oceanographic application of scatterometer data. Application of wind and wave scatterometry.

List of Text Books

1. Applied Remote Sensing C.P.L.O., Longman Scientific and Technical Publishers.
2. Introduction to Environmental Remote Sensing, E.C. Barrett & L.F Curtis, Chapman and Hall, London.
3. Remote Sensing in Hydrology, Engman, E.T. and Gurney, R.J.
4. Remote Sensing in water management in command areas, Govardhan, V.
5. Satellite Oceanography - An introduction to oceanographers and Remote Scientists, I.S. Robinson, Ellis Horwood Limited, Chichester.

Reference Books

1. Applications of Remote Sensing in Agriculture. M.D. Steven and J.A. Clark.
2. Remote Sensing methods and applications, Hord, R. Michael.
3. Satellite meteorology - Bramdi, Henoy Willnois; Air weather service, 1976.
4. Satellite Meteorology - An introduction, Stanley Q. Kidder and Thomas, H. Vonder Haar - Oxlando, Academic Press, 1995.
5. Environmental satellites,; systems data interpretation and applications, Jimmie D. Johnson, Frances, C. Parmenter, Ralph Anderson, Department of Commerce, NOAA.
6. The use of satellite data in rainfall monitoring, E.C. Barrett and D.W. Martin, Academic Press, New York.

Syllabus for Elective Subjects

Elective 1 – RSP 304.1 Coastal Zone Management

Unit 1

Coastal and littoral zones – definitions and scope of study

Shore zone processes – waves, tides and currents

Coastal landforms;

River deltas and dynamics of the delta-fringe coasts

coastal classification

Unit 2

Coastal wetlands – Mangrove swamps, marshes, lagoons, tidal channels/creeks and their significance in coastal stability and economic importance

Continental margins – forms and processes; territorial waters and Exclusive Economic Zone

Sea level changes – factors involved; effects of sea level oscillations on coastal zones

Unit 3

Coastal Hazards:

Storm surges and Tsunamis

Origin, propagation and run-up of tsunamis;

Tsunami impact – role of coastal topography and vegetation;

Global warming and Sea-level rise - impact on coastal zones; coastal vulnerability assessment

Coastal hazard preparedness – coastal protection, education and awareness of coastal communities

Unit 4

Human activity and coastal environment – deforestation, agriculture/aquaculture, pollution and coastal structures, and their effect on coastal zones

Coastal vegetation; shelter belts; coastal aquifers; fresh water-sea water interface

Morphology of Indian coasts

Unit 5

Coastal zone management – concepts, models and information systems

Application of remote sensing in coastal zone studies

Role of Geographic Information Systems in coastal zone studies

Text books

1. Geomorphology, Bloom, A.L., Prentice-Hall, 1978
2. Deltas, Coleman, J.M., Continuing education Publication Co.Inc. 1976
3. Coastal Sedimentary Environments, Davis, A.R. (Jr.), Springer-Verlag, 1985.
4. Beaches and Coasts, King, C.A.M., Edward Arnold, 1972
5. Introduction to Marine Geology and Geomorphology, King, C.A.M., Edward Arnold, 1974
6. Applications in Coastal Zone Research Management, Martin, K.St. (ed), U.N. Institute for Training and Research, 1993.
7. Integrated Ocean and Coastal Management, Sain, B.C., and Knecht, R.W., UNESCO Publication, 1998.
8. Subtle Issues in Coastal Management, Sudarshan et al., (ed), IIRS, Dehra Dun, 2000.
9. Tsunamis – case studies and recent developments, Satake, K. (ed), Springer, 2005

Elective 2 – RSP 304.2 - Natural Disaster Management

Unit-1

Various types of Natural Disasters - Cyclones, Floods and Tidal waves with most well known Indian examples, Classification of Disasters and nature of Impacts.

Unit-2

Various types of Natural Disasters - Earth quakes, land subsidence and Land slides, Forest fires, Drought with most well known Indian examples, Classifications and nature of impacts.

Unit-3

Vulnerability factors and Risk analysis of Natural disasters and Hazard estimations.

Unit-4

Natural disaster management plans, Shelterbelts, Special structures, Disaster preparedness and Mitigation.

Unit-5

Information needs of Disaster management, Remote Sensing Applications, GIS applications.

RSP 305 - Digital Image Processing Practical

Programme writing in C. language for Data handling and processing of Remote Sensing data including histogram construction, scene enlargement, rationing, enhancement and application of spatial filters : transformations, colour display techniques, Radiometric correction techniques, for existing satellites. Segmentation, classification methods: supervised and unsupervised techniques for different applications.

RSP 306 Satellite Meteorology, Agriculture and oceanography Practical

Mapping of cloud patterns and cloud types and weather systems
Rainfall monitoring using INSAT data
Surface water bodies mapping
Turbidity mapping in reservoirs, sea/ocean waters
Identification of erosion prone areas in watershed
GIS applications in watershed management and irrigation, command area development
Wetland mapping using satellite data
Mapping of water logged areas using remote sensing data
Flood mapping using remote sensing data
Sea surface temperature retrieval
Estimation of wind parameters
Crop and vegetation estimation and crop type identification and crop yield modeling

SEMESTERS IV Dissertation and Viva Voce

- A. Dissertation
The student for the fulfillment of M.Tech Degree in Remote Sensing, must carry out individual dissertation work.
- B. Comprehensive Viva Voce
 - a) Viva Voce will be conducted to the student by the external examiner and the internal research guide along with the Head of the Department and Chairman Board of Studies, on the topic of the dissertation carried out by the student.
