While many machine learning algorithms have been around for a long time, the ability to automatically apply complex mathematical calculations to big data – over and over, faster and faster – is a recent development. Here are a few widely publicized examples of machine learning applications you may be familiar with:

- The heavily hyped, self-driving Google car? The essence of machine learning.
- Online recommendation offers such as those from Amazon and Netflix? Machine learning applications for everyday life.
- Knowing what customers are saying about you on Twitter? Machine learning combined with linguistic rule creation.

So, what do we do about it? The Dept. of CS & SE develops skills – set among young engineers, faculty – and enable them to be capable of handling situations and guide the industry to re-evaluate their data capabilities.

Today many distributed teams are struggling to use the diverse options available to them with development projects. With technological advancements taking place every few months, it becomes difficult to keep pace unless you are a DevOps expert. But what if you could develop an ecosystem that grows seamlessly with LAMP, MEAN and multi-tenant and has completely rewritten for web developers such

MEANJS is an answer for MongoDB, Express, AngularJS and Node.js – enables all four have be integrated to form solutions that enhance business applications.

Almost every web development project in the market is trying to become a MEAN stack application.

So, What do we do about it? The Dept. of CS & SE develops skills on various programming languages and enables them to be capable of handling solutions and projects. MEANJS is our answer to such situations.
