(57) Abstract :

ABSTRACT: Title: Proteolysis Targeting Chimera Based Composition for Gastritis and Gastric Ulcers The present disclosure proposes a proteolysis targeting chimera-based composition for gastritis and gastric ulcers. The proposed composition directly targets the host-pathogen interaction between the bacteria and the host cell of the patient. The proposed composition reduces therapeutic failures. The proteolysis targeting chimera-based composition is suitable to be administered as a thermally stable small molecule in various forms such as tablets and intravenous injections thereof. The proposed composition permanently degrades the bacterial Cag A thereby preventing further cellular damage to the host cells of the patient.
